# TABLE OF CONTENTS

## General introduction

About the author; background and experience  
Quality assurance and health care reform in Hungary; how it started?  
Study description  
The objectives of the study  
Research questions  
Hypotheses  
Methodology  
Rationale  
Format of this thesis  

## HEALTH CARE IN HUNGARY

1. The population's health status in Hungary  
1.1 Introduction  
1.2 Health status of the population  
1.2.1 International perspectives  
1.3 Demography, mortality and morbidity of the Hungarian population  
1.3.1 Life expectancy and age specific death rate  
1.3.2 Major causes of death  
1.3.3 Major causes of diseases  
1.3.4 Prediction for the future  
1.4 Lifestyle: dietary habits, smoking, alcohol and drug control  
1.5 Data accuracy and validity  
1.6 Discussion: Why urgent action is needed?  
1.7 Where to go from here?  
1.7.1 Prevention of diseases  
1.7.2 Abstract vs. tacit knowledge and time preference of the population  
1.7.3 The role of quality assurance  
1.7.3.1 The necessity of reliable and valid data  
1.7.3.2 Improving the population's health status through improved effectiveness of health care  

2. The Hungarian health care system 1948-1998  
2.1 National Health Care System in Hungary - History  
2.1.1 Organisational and administrative structure  
2.1.2 Two periods of health policy and practice between 1948-1989 and 1990-1998  
2.2 Social and health insurance system  
2.3 The structure of the present health care system  
2.4 Hospital sector  
2.4.1 Structure  
2.4.1.1 Outpatient care

5 Quality of hospital care: patient satisfaction and patients’ reports in Hungarian hospitals

5.1 Study design
5.2 Patient satisfaction and its measurement
5.3 Development of the measurement tool: method
5.4 National survey of the quality of hospital care: results
5.4.1 Patient characteristics
5.4.2 Hospital choice, preferences, and access
5.4.3 Hospital admission
5.4.4 Hospital stay
5.4.4.1 Respect for patients’ values, preferences and expressed needs
5.4.4.2 Information and communication
5.4.4.3 Co-ordination and timeliness of care
5.4.4.4 Pain management
5.4.4.5 Surgical care
5.4.4.6 Environment, food, cleanliness
5.4.4.7 Visiting policies of hospitals
5.4.5.8 Hospital discharge
5.4.6 Discussion
5.4.6.1 Comparability of the results
5.4.6.2 Difficulties in using complex questionnaires - practical issues

5.5 Analysis of patient satisfaction management practice (PSM) of 59 hospitals
5.5.1 Methodological problems, validity and reliability of the existing PSM practice

5.6 Creative-Interactive Quality Improvement Pages (CIQIP)
5.6.1 CIQIP circles
5.6.2 The impact of CIQIP

5.7 Discussion, conclusion and recommendations
5.7.1 Direct questions, ‘patient reports’ are more usable than patient satisfaction questionnaires
5.7.2 Problems
5.7.3 Achieving change

6 Preoperative assessment in surgery in Hungarian hospitals

6.1 Why was preoperative assessment in surgery selected as one of the very first quality assurance topics in Hungary?
6.1.1 The main aim and methodology
6.1.2 Study design
6.1.3 Sample and data validity

6.2 The first evaluation of the preoperative routine in 17 hospitals in 1992/93
6.2.1 Interpretation of the result of the first study on preoperative routine and further quality assurance activities
6.2.1.1 Response rate and the receptivity of hospitals, Phase 1

6.3 The second evaluation of the preoperative routine in 20 hospitals in 1995
### Table of Contents

6.3.1 Interpretation of the result of the second study on preoperative routine and further quality assurance activities 197

6.4 The third evaluation of the preoperative routine in 9 hospitals in 1997 198
6.4.1 Interpretation of the result of the third study on preoperative routine and further quality assurance activities 198

6.5 Discussion 199
6.5.1 Process versus outcome measures of the preoperative assessment 200
6.5.2 County hospitals as change agents of quality improvement 200
6.5.3 Validity of the findings 201

6.6 Recommendation 202

7 Risk-adjusted surgical site infection surveillance in Hungarian hospitals 205

7.1 Introduction 207
7.2 Methods 208
7.2.1 Selection of participating hospitals 208
7.2.2 Surveillance methodology 208
7.2.3 Training and implementation of the surveillance methodology 208
7.2.4 Surgical procedures surveyed 209
7.2.5 Data and statistical analysis 209
7.2.6 Feedback of infection rates to hospitals 210

7.3 Results 210
7.4 Discussion 212

8 The quality of nursing care; prevention and treatment of pressure ulcers in Hungarian hospitals, 1992-1998 223

8.1 Pressure ulcers which are a serious health and public health problem as well as an economic burden, can largely be prevented 225

8.2 Objectives of the study 226

8.3 Pressure ulcers epidemiology: an international overview 226
8.3.1 Incidence of pressure ulcers 227
8.3.2 Prevalence of pressure ulcers 227

8.4 Aetiology, diagnosis and the importance of prevention of pressure ulcers 230
8.4.1 Risk and risk assessment 231

8.5 Quality of life, economic burden and disease forecast 232

8.6 The epidemiology of pressure ulcers and related quality assurance activities directed towards PU prevention and treatment in Hungary 233
8.6.1.1 Study design of the COMAC/HSR and BIOMED/PECO programmes 234
8.6.1.2 Results 235
8.6.1.3 How representative are the study conclusions 237

8.6.2 Phase 2: Retrospective national PU prevalence data collection 1993-1998 237
8.6.3 Phase 3: Passive hospital patient chart review to identify patients with PU cases, 1994 238
8.6.4 Phase 4: The reimbursement of hospitals for the care of patients with PU, 1994 240
8.6.4.1 Reimbursement of PU as a main diagnosis 240
8.6.4.2 Reimbursement of PU as a complication in 1994 241
8.6.4.3 Reimbursement of PU as a co-morbidity 241
8.6.5 Phase 5: Active prospective surveillance and risk assessment of 705 adult patients in one county hospital during 1995 242
8.6.6 Phase 6: The cost of PU care based upon the fate of 100 adult in-patients with PU within one county hospital 243
8.6.6.1 PU incidence and prevalence 244
8.6.6.2 Pressure ulcer risk assessment: a major ethical and economic issue 246
8.6.6.3 The financial cost of pressure ulcers 247
8.6.6.4 Pressure ulcer prevention and treatment technology 250
8.6.6.5 Estimating the burden and cost of PU at the national level 251
8.6.7 Phase 7: Changing PU prevention and treatment practices through the use of clinical protocols and guidelines, 1997-1998 252
8.7 Discussion and conclusion 253
8.7.1 General conclusions and recommendations 255

9 Quality of primary health care; physicians' and patients' reports on system performance 265

9.1 The need for information on performance and quality in primary health care 267
9.2 Primary health care 268
9.2.1 Quality improvement in primary health care 269
9.3 The need for a useful monitoring tool on system performance of primary health care in Hungary 270
9.3.1 Why patients' opinions could be useful for improving quality of primary care? 271
9.4 The PROSPER programme 271
9.4.1 Aims and objectives 272
9.4.2 Recruitment of GP practices and patient selection criteria 273
9.4.3 Short description of the study 274
9.5 Demographic data of the study population 274
9.6 Constructing indicators 275
9.7 Results of the PROSPER survey in Hungary 276
9.7.1 Oral medicines; drug prescribing practices and drug taking patterns in primary health care 277
9.7.2 Chronic conditions 285
9.7.3 Referrals 287
9.7.4 Blood tests 289
9.7.5 X-rays 291
9.7.6 Prevention in women 292
9.7.6.1 Breast cancer screening by palpation 293
9.7.6.2 Screening mammography 294
9.7.6.3 PAP smear 295
9.7.7 Data concerning access 296
Table of contents

9.7.8 Co-ordination of care 297
9.7.9 Continuity of care 298
9.7.10 Overall satisfaction 299

9.8 Discussion 300
9.8.1 Methodological considerations 300
9.8.2 Reasons for choosing the topics of the study 301
9.8.3 Issues of validity and reliability 301
9.8.4 The importance of the EURO-PROSPER methodology for quality of primary care 302

9.9 Conclusion and recommendation 303

10 Conclusions and recommendations 307

10.1 Research questions and hypotheses 309
10.2 The validity and generalizability of the findings 309
10.2.1 Study population; patients and health care settings 310
10.2.2 Case mix 310
10.2.3 Quality of care 310

10.3 Conclusions 311
10.4 Recommendations 312
10.5 Future development 314
10.5.1 Need for evaluation the effectiveness and cost-effectiveness of quality assurance programmes 314
10.5.2 How to achieve quality improvement in an effective and cost-effective way? 315
10.5.2.1 Cost-effective quality improvement 315
10.5.2.2 Scientific evidence and interpretation 316
10.5.2.3 Scientific evidence of quality assurance 317
10.5.2.4 Evidence of effective management innovation 317
10.5.2.5 Scientific evidence supporting 'achievable benefit not achieved' (a massive gap between efficacy and effectiveness) 318
10.5.2.6 Clear, and explicit goals 318
10.5.2.7 Proper outcomes in quality improvement? 319
10.5.2.8 Cost per unit of additional benefit to be calculated - incremental cost 319
10.5.2.9 Affordability 321
10.5.2.10 Check list 322

Closing sentences 322
