ACKNOWLEDGEMENTS

The author is most grateful to Professor Niek S. Klazinga, Head, Department of Social Medicine, Amsterdam University, for his advice, guidance and supervision regarding this thesis, and for his contribution to improving the quality of the healthcare system in Hungary as the leader of the European Concerted Action Programmes on Quality Assurance in Hospitals.

My special thanks are due to Professor Evert Reerink, CBO for his initial assistance in developing the ideas of this thesis.

The author also wishes to express his appreciation to Professor Donald Goldman and Dr. Charles Huskins, Harvard University, Boston, for the excellent joint work in the field of infection control to Professor Andrew Thompson, University of Edinburgh, for his contribution to the study on quality of the Hungarian primary health care, to Professor Gerald M. Pops, West Virginia University for his contribution of the Hungarian experiment on patient satisfaction and patient' report, to Professor Frans Rutten, Erasmus University for his helpful comments on effectiveness and cost-effectiveness of quality assurance activities; to Professor James Kahan, RAND Corporation Europe, Leiden and Professor Egon Jonsson (SBU, Stockholm) for their essential contribution to the chapter on preoperative assessment in surgery, to Professor Johan Mackenbach, Erasmus University, Dr. Peter Józan, Central Statistical Office, Budapest and to Dr. Imre Boncz, Hungarian Health Insurance Fund Administration for their valuable comments on the chapter on population’s health status; to Koos van den Velden, Director, School of Public Health (NSPH), Utrecht for his expert comments on the description of the Hungarian health system; to Dr. Jeen Haalboom, Associate Professor, Utrecht University and to Dr. Michael Clark, University of Wales, Cardiff for their invaluable comments on the chapter of nursing quality; prevention and treatment of pressure ulcers; to Dr. Charles Shaw, CASPE Research, London and to Professor Ellie Scrivens, Keele University for their comments on the chapter on the introduction of quality assurance in Hungary. Among those who merit special thanks are to my Hungarian colleagues both nurses and physicians, who have assisted me with this project and especially to Dr. Attila Kovács, deputy chief medical officer and Dr. Zsuzsanna Tatár-Kis, chief hospital epidemiologist, Medical University, Debrecen, who have exhibited unfailing enthusiasm and guidance.

I wish to acknowledge the editorial expertise of Gyöngyi Gombos Gulyás, who was instrumental in transforming the manuscript into finished pages. Finally my appreciation is due to Katalin Vittay Fedinecz MA for her expert assistance in revising the English text of my thesis.
