ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. ir. K.I.J. Maex

ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Aula der Universiteit
op vrijdag 22 februari 2019, te 13.00 uur

door

Theodorus Petrus Cornelis Beentjes
geboren te Uitgeest

TABLE OF CONTENTS

Preface	5
Author contributions	7
Introduction	8
1. Historical development of the sand mould casting technique	
1.1 Introduction	19
1.2 Sand mould casting	22
1.2.1 <i>Types of sand mould casting</i>	23
1.2.2 <i>The nature of moulding sand</i>	26
1.2.3 <i>Compositional data of moulding sand</i>	36
1.2.4 <i>Grain-size distribution of moulding sand</i>	39
1.2.5 <i>The effect of heat on the grain-size distribution of moulding sand</i>	44
1.3 The use of sand mould casting before the nineteenth century	48
1.3.1 <i>Goldsmiths and medal founders using sand moulds</i>	52
1.3.2 <i>The early use of sand mould casting for the production of domestic wares</i>	63
1.3.3 <i>First evidence for piece-moulding in sand</i>	70
1.4 The role of sand mould casting in the technical revolution of early modern Europe	76
1.5 Conclusion	79
2. The casting of sculpture in the nineteenth century	
2.1 Introduction	81
2.2 Evidence for the casting of bronze sculpture directly in piece-moulds before 1800	82
2.3 The casting of sculpture in France using sand moulds: 1800-1900	87
2.3.1 <i>Gonon and the casting of the monumental bronze of Jeanne d'Arc</i>	88
2.3.2 <i>Gonon's early sand mould casting technique</i>	89
2.3.3 <i>Launay and the first manual</i>	90
2.3.4 <i>Innovations in Launay's manual</i>	92
2.4 The casting of sculpture using sand moulds in Germany: 1800-1900	99
2.4.1 <i>Iron founding preceding bronze founding</i>	99
2.4.2 <i>The Gleiwitz manual</i>	101
2.4.3 <i>Bronze founders using sand piece-moulds: Dinger and contemporaries</i>	104
2.5 Evidence for sand mould casting in nineteenth century Italy	113
2.6 The casting of sculpture in Britain using piece-moulds: 1800-1900	115
2.7 The lost wax casting of bronze sculpture in the nineteenth century	118
2.8 Lost wax casting of monumental sculpture in Italy between 1800-1840	128
2.9 Conclusion	131
3. Modelling and moulding an icon: Rodin's <i>Thinker</i>	
3.1 Introduction	135
3.2 Rodin's atelier practice	136

3.2.1	<i>Artist's clay model</i>	136
3.2.2	<i>The Thinker in clay</i>	139
3.2.3	<i>The Thinker in terra-cotta</i>	143
3.3	The <i>Thinker</i> in plaster	145
3.3.1	<i>Moulding</i>	145
3.3.2	<i>Plaster waste-moulding</i>	146
3.3.3	<i>Plaster piece-moulding</i>	147
3.3.4	<i>Gelatine moulding</i>	147
3.4	Plaster models	149
3.4.1	<i>The Foundry plasters for Rodin's Thinkers in the Rodin Museum, Meudon</i>	153
3.4.2	<i>The Béziers exhibition plaster of the Thinker</i>	158
3.5	Conclusion	161

4. Casting Rodin's *Thinker*

4.1	Introduction	163
4.2	Sand moulding	164
4.2.1	<i>The pattern</i>	164
4.2.2	<i>Flasks or moulding boxes</i>	173
4.2.3	<i>False-cores</i>	174
4.2.4	<i>The core</i>	179
4.2.5	<i>Gating system</i>	187
4.2.6	<i>Drying the mould</i>	188
4.2.7	<i>The bronze alloy</i>	189
4.2.8	<i>Pouring the bronze</i>	195
4.2.9	<i>Finishing the cast</i>	196
4.3	Signatures and other markings	205
4.3.1	<i>Rodin's signature</i>	206
4.3.2	<i>Foundry mark</i>	210
4.3.3	<i>Raised foundry stamp</i>	211
4.3.4	<i>Dedications</i>	212
4.4	Patination	214
4.5	Lead counterweight	221
4.6	Production time	224
4.7	Conclusion	225

5. Rodin and his founders: lost wax and sand mould casting

5.1	Introduction	227
5.2	Sand mould cast <i>Thinkers</i>	227
5.2.1	<i>Assembled bronze Thinkers versus Thinkers cast in one piece</i>	227
5.3	Cire ou Sable: Rodin's dilemma in choosing a casting method for his bronzes	236
5.3.1	<i>Hébrard versus Rudier: lost wax versus sand</i>	236
5.3.2	<i>The cost difference between lost wax and sand mould castings</i>	244
5.3.3	<i>The ideal of lost wax casting: the artist-founder and the founder-artist</i>	245
5.3.4	<i>The lost wax cast Ionides Thinker: Bingen or Gonon?</i>	247
5.3.5	<i>Casting features of Gonon and Bingen bronzes</i>	251
5.3.6	<i>Alloy composition of Gonon and Bingen bronzes</i>	259
5.4	Conclusion	261

6. The case of the Laren *Thinker*: Controversy, Characterisation and Conservation

6.1	Introduction	263
6.2	Developing conservation options	264
6.2.1	<i>Methodology</i>	264
6.3	Characterisation	264
6.3.1	<i>Condition</i>	264
6.3.2	<i>Materials research: analysis</i>	267
6.3.3	<i>Comparison with other patterns and casts</i>	268
6.4	Determining the ideal state for the object and a realistic goal of treatment	269
6.4.1	<i>Controversy: To restore or not to restore, that's the question!</i>	269
6.4.2	<i>Committees and the project team</i>	274
6.5	Choosing the treatment method and materials	276
6.5.1	<i>Traditional treatment options for the restoration of bronze sculpture</i>	276
6.5.2	<i>The conservation challenge</i>	277
6.5.3	<i>3D scanning</i>	278
6.6	Treatment	279
6.6.1	<i>3D printing</i>	281
6.6.2	<i>Filling the lacunae</i>	282
6.7	A comparison between <i>Thinkers</i> using 3D imaging	288
6.7.1	<i>Introduction</i>	288
6.7.2	<i>3D imaging of sculpture</i>	289
6.7.3	<i>The 3D scanning of bronze sculpture</i>	290
6.7.4	<i>A case study with Rodin's Thinkers</i>	291
6.8	The use of 3D techniques for the treatment of the Laren <i>Thinker</i>	295
6.8.1	<i>3D technology in conservation of works of art: a conservator's view</i>	297
6.9	Communicating the treatment	299
6.10	Conclusion	301
	Conclusions	303
	Summary	309
	Samenvatting	315
	Bibliography	321
	Appendices	347

Preface

When in January 2007 Auguste Rodin's stolen and heavily damaged *Thinker* from the Singer Laren museum was recovered by police officers, few of the people involved could have anticipated this would be the subject of a doctoral thesis. Although the vandalism heavily damaged the integrity of the sculpture, it also provided a unique opportunity for research into treatment options as well as art technological aspects of its fabrication, the results of which are presented here.

As a conservator with a life-long interest into making processes, it was obvious for me that the focus of this study would veer towards the art-technological aspects of art works. It has always struck me, as a practitioner, that the manual aspects of the process of art in the making usually receive little attention. Specific intricacies of manual techniques, often the result of years of experience of the artist in question and his collaborators, are essential for the execution of an object and determine not only to a large extent its appearance but also its future condition. It is this condition of the object that initiates the involvement of a conservator, who is by nature wondering what is really original to the object, and what the result of deterioration over time. This has happened to me also many times when examining historic bronzes and has triggered my interest into the specifics of moulding and casting, lost wax as well as sand mould casting.

Close study of bronzes usually reveals an array of technical features, ranging from core material, armatures, core pins to core plugs, foundry patches and repairs. Some of these were carried out by the original foundry, while other features were carried out later. The foundry related features can provide important information on the working methods of the foundry and can be used as a tool for authentication and dating of the bronze. While most of my questions regarding lost wax casting could be answered by technical literature or consultation of colleagues, this was not the case with sand mould casting, a situation which prompted my interest in this founding technique. Casting in sand mould is often considered to be an inferior way of casting, more suitable for producing large runs of decorative and household items and not so much the great works of art. However, over the years I have handled and examined many objects, produced in sand moulds, of very high quality, equalling and sometimes even technically surpassing lost wax castings. The more I discovered on sand moulding and casting the more I felt that its reputation was not deserved.

The use of sand as a moulding and casting material is fascinating and has an intriguing history. What struck me most during my research was the ingenuity and skill of the moulders, being able to fabricate very complex moulds in a material that is extremely difficult to manipulate, a craft now virtually lost. I sincerely hope this thesis will contribute to a greater understanding and appreciation of sand mould casting and will benefit those involved in the study of sand mould cast objects and bronzes in particular.

This thesis is the result of the input of many conversations with my supervisors, whom I would like to thank first. It was under the expert guidance of Prof. dr. Frans Grijzenhout and Prof. dr. Norman Tennent, that my doctoral research materialised into the current thesis. Two other supervisors have also been instrumental for my research, Prof. dr. Jan Piet Filedt-Kok and Prof. dr. Frits Scholten and I am very grateful for their input.

Although conducting doctoral research is chiefly a lonely exercise, I enjoyed greatly the contacts with colleagues, within the university and internationally, and without their help this research would not be possible. This research greatly benefited from the ever-increasing amount of electronically available textual sources. However, libraries and helpful librarians are still indispensable and I would especially like to thank Annie Barbera, Sandra Boujot (Rodin Museum, Paris), Cor Smulders and Julian van den Berg (RCE), David Beasley (Goldsmiths Company London) and Ad Leerintveld (Royal library, The Hague)

Conservators and curators played an important role in the research providing information on bronzes and often enabling access to the objects, and I would like to thank: David Thurrowgood, Linda Borsch and James Draper (Metropolitan Museum of Art, New York), Carol Snow (Yale University Art Gallery), Alexandra Czarnecki (Alte Nationalgalerie, Berlin), Francisca Vandepitte (Musées royaux d'Art et d'Histoire, Brussels), Sally Malenka (Philadelphia Museum of Art), Anne-Sophie Kofoed Rasmussen & Nili Baruch (Odrupgaard, Copenhagen), Jan Rudolph de Lorm, Reinier Sinaasappel, Anne van Lienden (Singer museum, Laren), Lisha Glinsman, Daphne Barbour and Shelley Sturman (National Gallery, Washington), Ulysses Grant Dietz (Newark Museum), Jane Bassett and Arlen Heginbotham (J.P. Getty museum, Los Angeles), Arie Pappot and Joosje van Bennekom (Rijksmuseum, Amsterdam), Rupert Harris and Maximilian Heimler. The support from the Rodin Museum in Paris was indispensable and I would like to thank Catherine Chevillot, Aline Magnien and in particular François Blanchetière.

This research would not have been possible without the support of my employer, the University of Amsterdam. A special thanks is for fellow researchers and practitioners: Elisabeth Lebon, Chiara Teolato, Giuseppe Rizzo, Ubaldo Vitali, Bastian Asmus, Jean Dubos, Christophe Bery, Charles Trollope, Duncan James, Jacob Simon, Christopher Fulton, Jerome le Blay, Lorenzo Morigi, Frank C. Möller, Ad Stijnman, Karen Stemann, Mark Rabinowitz, Bill Makky, Andrea Bernardoni, Stefania Lorenzotti, Sven Dupré, Jan Dorscheid and Rozemarijn van der Molen. For the material research I am indebted to: Hans van der Weijde (Tata Steel, IJmuiden), Ineke Joosten, Luc Megens and Bertil van Os (RCE), Richard Smeets and Gareth Davies (VU Amsterdam), Dirk Goossens (KU, Louvain) and Daria Prandstraller (Unibo, Bologna). I am grateful for the support of my UvA colleagues in general and the following persons in particular: Jan de Vries, Jørgen Wadum, Kate van Lookeren Campagne-Nuttall, Tamar Davidowitz, Ellen van Bork, Herman den Otter and Emilie Froment.

My greatest thanks go to Vivianne, Hugo and Elyas, your patience is more than remarkable and without your support I could not have completed this thesis.

Author contributions

The research presented in this thesis has resulted in various papers.¹ Some of these were co-authored. Of one of these papers, *3-D imaging as a research tool for the study of bronze sculpture*, parts have been incorporated in this thesis in the form of sub-chapter 6.7 *A comparison between Thinkers using 3D imaging*.

I have used only those parts of the paper that were my original contribution. Of the three co-authors, Ronald Street, David Thurrowgood and François Blanchetière, only Ronald Street has contributed written text to the paper: the last section of paragraph *Technological research*: discussing the alignment of 3D scans and the paragraph *Accuracy of 3-D imaging*.
