This work was conducted at the Van 't Hoff Institute for Molecular Sciences, University of Amsterdam. The research project was funded internally by the University of Amsterdam.

Analytical approaches for studying occurrence and fate of environmental micro- and nanoplastics

ACADEMISCH PROEFSCHRIFT

ter verkrijging van de graad van doctor
aan de Universiteit van Amsterdam
op gezag van de Rector Magnificus
prof. dr. ir. P.P.C.C. Verbeek
ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Aula der Universiteit
op woensdag 24 juni 2026, te 11.00 uur

door Maria Weronika Hayder
geboren te Warszawa

Promotiecommissie

Promotores:	prof. dr. G.J.M. Gruter	Universiteit van Amsterdam
	prof. dr. A.P. van Wezel	Universiteit Utrecht
Copromotores:	dr. A. Astefanei	Universiteit van Amsterdam
	dr. C. Angelici	Avantium
Overige leden:	prof. dr. G.L. Corthals	Universiteit van Amsterdam
	dr. A. Praetorius	Universiteit van Amsterdam
	dr. T.L. ter Laak	KWR Water Research Institute
	prof. dr. A. Lederer	Leibniz-Institut fuer Polymerforschung Dresden
	prof. dr. M.H. Lamoree	Vrije Universiteit Amsterdam
	prof. dr. R.A.H. Peters	Covestro

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

Table of contents

Chapter 1. Introduction	**8**
1.1. Plastic production and waste management	9
1.2. Presence of plastic particles in the environment	9
1.3. Nanoplastics fate in the environment	11
1.3.1. NP sources in the environment	11
1.3.2. Plastic fragmentation	11
1.3.3. NP transport	12
1.3.4. Aggregation and biofilm formation	13
1.4. Exposure to MNPs	14
1.5. Toxicological effects of micro- and nanoplastics	15
1.6. Challenges in nanoplastics analysis	17
1.7. Confirmed presence of NPs in the environment	20
1.8. Social impact of micro- and nanoplastics pollution	24
1.9. The scope of this thesis	25
1.10. References	30
Chapter 2. Quantification of micro- and nanoplastics	**56**
2.1. Introduction	57
2.1.1. Challenges in nanoplastic quantification	59
2.2. Quantification of number concentrations of micro- and nanoplastics	60
2.2.1. Particle-based quantification of microplastics	60
2.2.2. Single particle-inductively coupled plasma mass spectrometry (SP-ICP-MS)	61
2.2.3. Light scattering (LS)	65
2.2.4. Raman-based analysis	66
2.2.4.1. Bioindicator + Raman	67
2.3. Quantification of mass of micro- and nanoplastics	69
2.3.1. Pyrolysis-gas chromatography-mass spectrometry (Py-GC-MS)	69
2.3.2. Thermal desorption-proton transfer reaction-mass spectrometry (TD-PTR-MS)	76
2.3.3. Depolymerization methods	78
2.3.4. Nuclear Magnetic Resonance	81
2.3.5 Surface-Enhanced Raman Spectroscopy (SERS)	82
2.4. Assessment of suitability of quantification techniques per plastic	85
2.5. Conclusions and future perspectives	90

2.6. References 91
Chapter 3. Integrating AF4 and Py-GC-MS for combined size-resolved polymer-compositional analysis of nanoplastics with application to wastewater 103
3.1. Introduction 104
3.2. Materials and Methods 105
3.2.1. Chemicals 105
3.2.2. Wastewater samples 105
3.2.3. AF4-MALS measurements 105
3.2.4. Py-GC-MS measurements 106
3.2.5. Sample handling 107
3.2.6. Contamination precautions and quality control 108
3.3. Results and Discussion 108
3.3.1. LVI-AF4-UV-MALS method development 108
3.3.2. Py-GC-MS method development 109
3.3.3. Sample handling throughout the workflow 110
3.3.4. LVI-AF4-UV-MALS-Py-GC-MS method demonstration 111
3.3.5. Wastewater analysis 113
3.4. Relevance and limitations of the study 115
3.4.1. Overall quality control 115
3.4.2. Alternative strategies for coupling AF4 to Py-GC-MS 118
3.4.3. Limitations and perspectives 119
3.5. Conclusions 120
3.6. References 121
Chapter 4. Expanding analytical toolbox for polyester micro- and nanoplastics in complex matrices with a simple depolymerization method 130
4.1. Introduction 131
4.2. Materials and methods 133
4.2.1. Chemicals and samples 133
4.2.2. PEF glycolysis and quantification 134
4.2.3. LC-UV analysis 135
4.2.4. Method validation 136
4.3. Results and Discussion 136
4.3.1. PEF quantification 136
4.4. Conclusions 138
4.5. References 138

Chapter 5. Size-resolved polymer quantification of nanoplastics after realistic long-term exposure of plastics in fresh- and seawater **144**
5.1. Introduction 145
5.2. Materials and methods 146
5.2.1. Chemicals 146
5.2.2. Plastic degradation in fresh- and seawater mesocosms 146
5.2.3 Sampling 147
5.2.4. Sample handling 147
5.2.5. AF4 analysis 148
5.2.6. AF4 potential for sample desalting 149
5.2.7. Py-GC-MS analysis 149
5.2.8. Contamination precautions and quality assurance 150
5.3. Results and discussion 150
5.3.1. Nanoplastic detection in seawater and freshwater 150
5.3.2. Nanoplastic size distributions in fresh- and seawater 152
5.3.3. Nanoplastic fate in fresh- and seawater 153
5.3.4. Limitations and perspectives 154
5.4. Conclusions 156
5.5. References 156
5.6. Supporting information 162
Chapter 6. Exposure to microplastics from food: comparative analysis of food types and quantification techniques **174**
6.1. Introduction 175
6.2. Methods 176
6.2.1. Data collection and categorization 176
6.2.2. Quality assessment of the collected data 177
6.2.3. Extrapolating datapoints to a common size range 177
6.2.4. Estimated daily intake 177
6.2.5. Statistics 177
6.3. Results and Discussion 178
6.3.1. Data distribution 178
6.3.2. Quality of data 179
6.3.3. EDI of MPs with different food types 180
6.3.4. Dependence of EDI on analytical techniques 183
6.3.5. Microplastic characteristics in the food samples 184
6.3.6. Knowledge gaps and future recommendations 188
6.4. Conclusions 189
6.5. References 189

Chapter 7. What if you eat nanoplastics? Simulating nanoplastics fate during gastrointestinal digestion **222**
7.1. Introduction 223
7.2. Materials and Methods 224
7.2.1 Chemicals 224
7.2.2. Instrumentation 225
7.2.3 Synthesis of PLGA-PEG-PLGA-based nanoparticles 226
7.2.4 In vitro simulation of gastrointestinal digestion 226
7.2.5 Analysis of polymer nanoparticles by FI-AF4-UV-MALS 227
7.2.6 Analysis of polymer nanoparticles by DLS 227
7.2.7 SEM observations 228
7.3. Results and Discussion 229
7.3.1 Homo- and heteroagglomeration of polymer nanoparticles as measured by DLS 229
7.3.2 Effect of size and surface charge in simplified in vitro digestion of polymer nanoparticles 231
7.3.3. Visualization of digested polymer nanoparticles 233
7.3.4. Relevance and limitations of the study 235
7.4. Conclusions 238
7.5. References 240
Chapter 8. Synthesis, conclusions and outlook **249**
8.1. Analysis 249
8.1.1. Challenges and approaches in NPs quantification 249
8.1.2. AF4 and Py-GC-MS for NP analysis 252
8.1.3. Py-GC-MS 256
8.1.4. NP mass quantification beyond thermal decomposition 258
8.2. Environmental fate of NPs 259
8.3. MNP exposure from food 259
8.4. MPs *vs* NPs 260
8.5. Implications of this work 261
8.6. Recommendations for future research 262
8.7. References 266
Summary **272**
Samenvatting **274**
Podsumowanie **276**
