ACKNOWLEDGEMENTS

As with any study that stretches over several years it will be hard to acknowledge all those who helped me by word and deed. The only way I could think of expressing my appreciation for all those who have helped and supported me without forgetting anybody would be by a simple 'thank you all'. While running the risk of forgetting those who deserve mentioning, in order to make these acknowledgements slightly more personal, I will nevertheless make an attempt to thank people personally.

First of all I would like to thank my promoter Professor Steph Menken for taking on this project, and for his support over the last few years; this extends to my former supervisors in Amsterdam, Dr Jan Wattel and Dr Peter van Bree. I also wish to thank my scientific counterparts in Indonesia for their help: Iwan Setiawan, Andi Prima Setiadi, and Dr Dewi M. Prawiradilaga.

The Indonesian Institute of Sciences (LIPI), the Directorate General for Forest Protection and Conservation (PKA, formerly PHPA) and the Ministry of Forestry and Estate Crops (MOFEC, formerly MoF) allowing me to carry out the surveys and to conduct my research. In the field I was not rarely assisted and guided by PHPA officers for which I express my gratitude.

Although I spent considerable time in the forest on my own, I greatly appreciate the times others joined me while climbing mountains and walking through the forests. I like to mention Bas van Balen, Gabriëlla Frederiksson, Thomas Geissmann, Asep Purnama, Andi Prima Setiadi, Iwan Setiawan and Resit Sözer. Gabriella is thanked for providing an excellent shelter in Sungai Wain, and for good talks. Visits to Bas and Like in Bogor and Resit and Ana in Sukabumi made the hectic life in the city more bearable.

In Indonesia I received support from a large number of people and institutions. My thanks go to the directors and staff at Puslitbang Biologi and Museum Zoologi Bogor: Dr Soenarton Adisoemara, Dr Soetikno Wirjoatmodjo, Dr Sampoerno Kadarsan, Drs M. Amir, Dr Dewi M. Prawiradilaga, Dr Arie Budiman, and Drs Boeadi; at the division of Inter-institutional cooperation of LIPI: Dewi Soenarijadi, Krisbiwati, Mangembang Tarihoran, Sophie Muzwar, and Ina Syarief; at FFI-Indonesia: Dr Jito Sugarjito; at the BirdLife International Indonesia Programme in Bogor: Paul Jepson, Richard Grimmett, Colin Trainor, Ria Saryanthi, Rudyanto, Sujatnika, Wara Hapsari, Iwan Setiawan, Yusup Cahyadin, and all the others; at WWF-Indonesia: Tim Jessup, Ron Lilly, Barita Manullang, and A. Purnomo; at MOFEC Tropenbos: Bas van Helvoort and Tinus de Kam.

Working with various NGO's on Java was a pleasant way of getting more people involved in the conservation of forest and forest animals. I like to thank all at Kutilang IBC, Yogyakarta; KSBK, Malang; YPAL, Bandung; Konus, Bandung; NGO-movement, Bogor; KIH, Semarang; CIBA, Cibodas; Mitra Dieng, Pekalongan and Semarang, and I wish you all the best with your future work. Thanks to Resit Sözer, Bas van Balen and Ria Saryanthi for their help in preparing the Indonesian summaries at short notice.

In the Netherlands it was always a pleasure to work at number 61: Wouter Los, Tineke Prins, Kees Roselaar, Jan Wattel, Peter van Bree, Wim Bergmans, Arne Mooers, Daniëlle Kreb, Martjan Lammertink, Willemijn Prast, Kees Hazevoet,
Resit Sözer, Rutger Vos and all the others are thanked. Working at the Department of Animal Behaviour has always been a delight. The support of Dr Helmut Albrecht as former head of the department and sharing his views on research, conservation, and life in general are greatly appreciated. The other ethologist in Amsterdam, Dr Boudewijn Heuts introduced me to the hidden pleasures of statistics and experimental design for which my thanks. This extends to all the students who participated in SP 240 Animal Behaviour and to those who chose to conduct their field work with the department; I probably learned as much from them as they from me.

My sincere thanks go to the mammal curators of the Zoological Museum Amsterdam (Dr. P.J.H. van Bree), Zoological Museum Bogor (Drs Boeadi), National Museum of Natural History, Leiden (Dr C. Smeenk), British Museum for Natural History, London (Dr P. Jenkins), and the Zoological Reference Collection (Dr C.M. Yang, Prof. dr. P. Ng) for allowing me to examine specimens in the collections under their care, and for help of various sorts.

Almost half of the chapters included in this thesis are co-authored by others, viz., Steph Menken, Thomas Geissmann, Bas van Balen and Erik Meijaard. All four different, I greatly appreciated working with you and I am sure our collaboration will continue. I want to thank you for your permission to include our mutual work in this thesis. Part of the data analysis for chapters five, six, and eight were done in partial fulfilment for passing the requirements for a degree in Behavioural Ecology at the Manchester Metropolitan University; my thanks to my supervisors Dr Chris Goldspink and Dr Jan Chapman, and Sara Jayne Booth for their help in this. I thank Prof. dr. F. Schram, Prof. dr. W. Admiraal, Prof. dr. H.H.T. Prins, Dr. H.H. Albrecht, Dr. H.D. Rijksen and Dr. T. Geissmann for participating in the thesis examining committee.

I also would like to thank the (anonymous) reviewers and editors of the journals in which most of the chapters in this thesis were published originally for their time and effort in improving the papers offered to them. All those people who helped with comments and suggestions on individual chapters are thanked in the acknowledgement sections at the end of each chapter.

Additional financial support for the study came from the Netherlands Foundation for International Nature Protection (Van Tienhoven Stichting), Society for the Advancement of Research in the Tropics (Treub Maatschappij), Stichting het Kronendak, H.H. van Urk Fund, and the Gibbon Foundation. Thanks due to Hans de Jongh and Jelle Maas of the Tropenbos Foundation in their help publishing this thesis in the Tropenbos Kalimantan Series, and to the University of Amsterdam for their financial support.

Finally, as has become customary but therefore not less sincere, I would like to thank my friends and family for their help and support as well as for reminding me that there is more to life than science.

Amsterdam, May 2001
