## Contents

1 Introduction  1

1.1 The evolution of AGB stars  1

1.2 Mass loss from AGB stars  1

1.3 Unsolved problems related to the evolution and mass loss of AGB stars  2

1.4 The study of AGB stars in the Magellanic Clouds  3

1.5 Outline of the work described in this thesis  5

2 Obscured Asymptotic Giant Branch stars in the Magellanic Clouds: New IRAS counterparts  7

2.1 Introduction  7

2.2 Observations  8

2.2.1 Sample  8

2.2.2 J and K-band imaging photometry  9

2.2.3 BVRI-band imaging photometry  10

2.3 Results  11

2.3.1 Identification with IRAS sources  11

2.3.2 Serendipitous detections  11

2.3.3 Galaxies as a probe of the interstellar extinction inside the LMC  14

2.4 The nature of the IRAS counterparts  17

2.4.1 Chemical classification from colours and magnitudes  17

2.4.2 Post-AGB star candidates  21

2.4.3 The stellar counterpart of LI-LMC1821  21

2.5 Bolometric luminosities  23

2.6 Discussion  24

2.6.1 AGB stars  24

2.6.2 Future searches for mass-losing AGB stars  27

2.6.3 Post-AGB stars  27

2.6.4 Thermal Pulse stars  31

2.7 Summary  32

3 Obscured Asymptotic Giant Branch stars in the Magellanic Clouds: Carbon stars and OH/IR stars  35

3.1 Introduction  35

3.2 Mid-infrared imaging photometry  37

3.3 Near-infrared photometry  38

3.4 A search for OH maser emission from two LMC fields  38

3.4.1 OH Observations  39
