Contents
(full text online www.infex.com)

Introduction

1. Outline of this thesis
2. Artemisinin drugs in the treatment of malaria: from medicinal herb to registered medication

Pharmacology

3. Validation of an improved reversed-phase HPLC assay with reductive electrochemical detection for the determination of artemisinin derivatives in man
   *Therapeutic Drug Monitoring* 1998; 20:109-116

4. The development of an immunoassay for the detection of artemisinin compounds in urine
   *American Journal of Tropical Medicine and Hygiene* September 1999 (in press)

5. Some pharmacokinetic and -dynamic comparisons of artemisinin derivatives in man
Studies in patients

6. Multiple dose pharmacokinetics of artemether in Chinese patients with uncomplicated falciparum malaria

7. The comparative efficacy and tolerability of CGP 56697 (artemether + lumefantrine) versus halofantrine in the treatment of uncomplicated falciparum malaria in travellers returning from The Tropics to The Netherlands and France.

Studies in healthy subjects

8. The contribution of the enzymes CYP2D6 and CYP2C19 in the demethylation of artemether in healthy subjects
*European Journal of Drug Metabolism and Pharmacokinetics* 1998:23:3;429-436 129

9. Grapefruit juice increases the bioavailability of artemether

10. The effect of grapefruit juice on the time-dependent decline of artemether plasma levels in healthy subjects
*Clinical Pharmacology and Therapeutics* (accepted) 161

11. Summary and general discussion of thesis in English and in Dutch 179
Including: ‘Artemisinine derivaten: een nieuwe therapie voor malaria’
*Pharmaceutisch Weekblad* 1998, 133; 2: 68-75

Dankwoord
