Acknowledgements

This book is the result of my PhD project conducted at the University of Amsterdam from October 1994 to October 1998. I would like to thank some individuals and institutions who contributed to this project. Above all I thank my advisors Peter Boswijk and Jan Kiviet for their excellent guidance and for allowing me to follow my own research path. I also thank the other members of my thesis committee, Mars Cramer, Herman van Dijk, Jan de Gooijer, Cars Hommes, Eric Renault and Peter Schotman, for reading the first draft of this thesis and for providing valuable comments. Furthermore, I owe many thanks to my co-author George Jiang for allowing me to draw on our joint research in Chapters 6 and 7 and for our nice cooperation, to Jurgen Doornik for giving me helpful feedback on computing issues and for his excellent programming language Ox. I also thank some editors and anonymous referees, numerous seminar participants and discussants, my former colleagues from the former Department of Actuarial Science, Quantitative Methods and Econometrics at the University of Amsterdam, my current colleagues from CentER and from the Econometrics Department, both at Tilburg University, the people from SARA Supercomputing Facilities and others whom I might have consulted occasionally, in particular Noud van Giersbergen, Eric Ghysels, Jesper Lund, Grayham Mizon and Neil Shephard. I thank the Econometric Society, the European Community, the Fondazione Marchi-Firenze, the Netherlands Organization for Scientific Research (NWO), Shell Company and the Tinbergen Institute for financial support. Last but not least, I thank my wife Lidewey, my family and friends for their stimulating moral support.
