Disclaimer/Complaints regulations
If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
Table of Contents

1. General Introduction 9

2. Infectious cellular load in HIV-1-infected individuals and susceptibility of PBMC from their exposed partners to NSI HIV-1 as major determinants for HIV-1 transmission in homosexual couples  

3. Susceptibility of in vitro stimulated PBMC to infection with NSI HIV-1 is associated with levels of CCR5 expression and β-chemokine production  
   Submitted for publication (1999)

4. Adaptation to promiscuous usage of chemokine receptors is not a prerequisite for HIV-1 disease progression  

5. CCR5 cell-surface expression in relation to CCR5 genotype and the clinical course of HIV-1 infection  

6. Temporal relationship between HIV-1 RNA levels in serum and cellular infectious load in peripheral blood  

7. In vitro replication kinetics of HIV-1 variants in relation to virus load in long-term survivors of HIV-1 infection  

8. Evolution of SI and NSI biological virus clones in relation to replication kinetics during the course of HIV-1 infection  

9. In vivo HIV-1 infection of CD45RA*CD4*T cells is established primarily by SI variants and correlates with the rate of CD4* T cell decline  
   Submitted for publication (1999)

10. Differential coreceptor expression within CD45RA+ naive and CD45RO+ memory CD4* T cells provide distinct cellular niches for independent NSI and SI HIV-1 evolution  
    Submitted for publication (1999)

11. General Discussion
    HIV-1 infection (1): The two 'parties'
    HIV-1 infection (2): The 'battlefield'
