DANKWOORD
DANKWOORD

De volgende personen die direct of indirect bij de totstandkoming van dit proefschrift betrokken zijn geweest wil ik graag bedanken.

Prof. Dr. J.J. Piek. Dear Professor Piek, beste Jan. I am very grateful for your support throughout the preparation of this thesis. I always felt very welcome under your guidance and in your department. The first closer contact was when Niels proposed to you that it would be a good idea for me to work a while at the AMC, you immediately agreed and always supported the close collaboration between Bad Nauheim and Amsterdam. During that time I had the opportunity to expand my knowledge of collateral artery growth from the more “basic” mechanistic view to the clinical aspects of arteriogenesis. Furthermore, I got to know you as a very competent, loyal and supportive person concerning all aspects of research, including congress meetings, study design and manuscript writing and processing. In this regard, I would also like to thank you once again for your important suggestions for the ICAM-manuscript that would probably still be under review if it hadn’t been for your comments that made a rapid publication possible. It has been a great pleasure to have had you as the promoter of my thesis and I am indeed extremely grateful for all the help, support and suggestions that made this “proefschrift” to what it is now.

Prof. Dr. W. Schaper. Dear Professor Schaper. It has been a great pleasure and a privilege to undertake my first steps in the field of arteriogenesis under your supervision. You are definitely, as Niels has already mentioned in his PhD thesis, the “Godfather of Arteriogenesis” and you will be forever. I feel honored that you gave me the possibility and the support to work in your institute and that has changed my life forever. I am also very grateful that you supported the idea of a dutch-german collaboration between the AMC and the Max-Planck-Institute that finally allowed for this thesis.

Prof. Dr. J. Schaper. Dear Professor Schaper. Although I started at your husbands department, I always felt welcome in your research group and I have very much profited from your support during the time in Bad Nauheim. Whenever questions arose, concerning histological details or not, you had an open door and helped me wherever possible.

Prof. Dr. Ch. Bode. Dear Professor Bode. I am very grateful for your support in Freiburg. You not only made it possible to work in your department clinically but also left space to continue the experimental work we started. It has been a pleasure to be part of your team.

Prof. Dr. C. Ince. Dear Professor Ince. I am grateful for the support within your department during my time in Amsterdam and the possibility to use your high-tech machines.

Prof. Dr. S. Pals. Dear Professor Pals. Thank you very much for the support with the enclosed CD44 manuscript and for the evaluation of this thesis.

Prof. Dr. P. Reitsma. Dear Professor Reitsma. I am very grateful for your critical review and evaluation of my “proefschrift”.  

230
Prof. Dr. J. Spaan. Dear Professor Spaan. It has been a pleasure to learn about a lot of the different aspects of microsphere technology in your department.

Prof. Dr. A. Wilde. Dear Professor de Wilde. I highly appreciate your efforts and critical review of my thesis.

Niels van Royen. Beste Niels. It has always been a great pleasure to work with you throughout the years in all the different places. Wherever we went, it was lots of fun and I am glad that you joined us when we moved to Freiburg. I am very grateful for your and Marije’s friendship. When I came to Amsterdam you organized almost everything and you made sure that I was taken care of during my time there. You also introduced Katja and me to the rest of your family and it has been a joy to watch Bruno and Marius grow and I hope that we will have the opportunity to continue doing so. Last but not least I would like to conclude that without your support this thesis wouldn’t have been possible.

Ivo Buschmann. Dear Ivo. We started almost at the same time in Bad Nauheim and since then this constellation has been very fruitful. I always regarded it as a team work that also resulted in the Volkswagengrant that allowed us to build up a very constructive lab with enormously eager students. Katja and I always enjoyed the friendship with you and Eva and I hope this will not stop with your move to Berlin. Your support and guidance very much promoted my career and I am looking forward to continuing this intense collaboration. I wish you and Eva a very good time in the capital and that your expectations will be fulfilled.

Michiel Voskuil. Beste Michiel. Besides a few concrete projects we worked on together, you have also always been very helpful with smaller and larger things. Whenever Niels was not there, you were also “in charge” of taking care of Katja and me in Amsterdam, which was always a great pleasure for us. I am very grateful for the collaboration and I am happy that you made it possible to act as “paranimfie” during the defense of this thesis. I am looking forward to continuing our work and to staying in contact with you and Elsbeth.

C. Keith Ozaki. Dear Keith. When we first met during the Keystone meeting in Santa Fe, I remember everyone being astonished by your cool, relaxed, open and friendly appearance. It has always been a great pleasure to come to visit you and your family in Gainesville, where I got to know the best steaks ever – a tradition that should never stop. Furthermore, you took us to that amazing island of yours. In addition, I would also very much like to thank the members of your lab, in particular John and Zaher, who were an important part during our common projects.

Sebastian Grundmann. Dear Sebastian. Since your start in the catacombs of the surgery department you have become the most important co-worker and friend in the lab. While you were busy with all kinds of stuff like preparing your exams etc., you always had the mind to discuss things and made it possible to perform experiments despite the tight schedule of yours. Although nobody ever doubted. I
am very happy that you finally passed your exams in such an outstanding way. I am sure that we will keep in close contact with you and Ulrike and I would be more than happy to witness your promising career. Finally, I would like to add that I definitely owe you a lot for the last two years.

**Jing Hua.** Dear Jing. You are probably one of the most admirable persons I have ever met. Within your young life you already finished your medical school in China, came to Germany and learned an almost perfect German within a year or so. This went on and you learned all techniques necessary for your experimental work in an amazingly short time. Despite your work at the lab, you managed to finish the German medical school and when asked to work a few months in the States, there never was a moment of hesitation. I wish you all the best with your clinical career and hope to stay in contact.

**Felix Hedwig.** Dear Felix. Under your calm, friendly and modest cover, you are an astoundingly eager person; a fact that I realized within the last months. It has been a great pleasure for me to have worked with you and I was again and again surprised by your persistence, once you started a project. Furthermore, you were a very important part of social life in the lab and the most important person concerning all matters of modern communication.

**Stephan Schirmer.** Dear Stephan. For me, you will always remain the master of getting free-of-charge samples of all kinds of lab stuff. Although all students in the lab were always very eager, you are likely the keenest and most ambitious.

**Benjamin Meder.** Dear Benjamin. Despite your modesty, I never had any doubt about your abilities. Building the “Bratwurstmaker” was great fun and I am grateful for your help with this project. You have always been extremely reliable and always found a nice way for telling me the impossibility of some of my often fancy ideas with this machine.

**Susann Ulusans.** Dear Susann. You have been, apart from being friend, a very important part of many projects within the last two years. Without you, some of these projects probably wouldn’t have been possible, at least not within this time frame. It has been great fun to work with you. Furthermore, Katja and I have had the pleasure to learn that you are the German version of Jamie Oliver, and we are looking forward to being invited by you and Erik to many more dinner evenings.

**Elena Ninci and Marco Jost.** Dear Elena, Dear Marco. It has been a pleasure working with you in Freiburg. Dear Elena, you have been a very important person for all the students in the lab, not only scientifically, but also by taking care of the welfare of everybody. Dear Marco, I wish you all the best for your new position and I do sincerely hope that there will be an ongoing collaboration to finish some of our most interesting projects in the near and the far future.

**Caroline Berghart.** Dear Caroline. Although we had a somewhat mixed-up start due to the setup of the new methods, our collaboration prospered. Even more important, it developed to a friendship I do not want to miss. I am very sorry that
you finally left us, but I am sure that we will not lose sight and stay in contact with you and Hannes.

**Stephanie Fischer and Susanne Hartmann.** Dear Steffi, Dear Susi. As the lab’s technicians, you both had great parts in the work and the resulting publications. You have been very important for the lab, due to your knowledge, supervision of the lab and for always keeping the people in a good mood by organizing various social events. Dear Steffi, I am looking forward to working with you in Freiburg. Dear Susi, I hope everything in Berlin develops as wanted.

**Jan-Philip Andert, Imke Bergmann and Caroline Kempf.** You are all very talented researchers and I hope that none of you will stop doing research after finishing your theses. Dear Imke, your nice little stories of your wild youth have always been very funny and interesting. I have to admit, although I like to tell them in a slightly “developed” version, nobody tells them better than you.

**Martijn Meuwissen and Steven Chamuleau.** Beste Martijn, Beste Steven. You welcomed me in Amsterdam in the best way. Together with Niels and Michiel you made this a great and unforgettable experience and it is always a great pleasure to meet you at meetings etc. which “revives” the good memories of my time in Amsterdam.

**Hans-Martin. Astrid and Sara.** Dear Sara. I have very much enjoyed coming back to Freiburg, although more or less accidentally, as that gave me the chance to be in closer contact to you. Dear Hans-Martin and Astrid, you always supported me when I wanted to study medicine after finishing my “Zivildienst” and during medical school. Although you sometimes nagged me with completing my thesis, I actually cannot remember a single time where you did not support any decision I made concerning my professional career.

**Judy.** Dear Judy. You were always very supportive during my way through university, Bad Nauheim, Amsterdam and Freiburg. I would like to thank you for your patience with my (from your point of view) sometimes hard to understand decisions. I am very happy that you welcomed Katja in such a nice way, which made the (re-)start in Freiburg much easier.
