Disclaimer/Complaints regulations

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <https://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Contents

Acknowledgments	v
1 Interactive exploration environments	1
1.1 Introduction	1
1.2 Interactive exploration	1
1.2.1 Static environments	2
1.2.2 Dynamic environments	4
1.3 Scientific visualization	5
1.3.1 Display techniques	6
1.3.2 The visualization pipeline	7
1.3.3 Interactive Scientific Visualization	8
1.4 Virtual Reality	8
1.4.1 Historical background	9
1.4.2 A taxonomy of VR systems	11
1.4.3 Components in a VR system	13
1.5 The Cave Automated Virtual Environment	16
1.5.1 Computing and graphics hardware	17
1.5.2 Projection system	18
1.5.3 Interaction devices	20
1.5.4 Writing CAVE applications	20
1.6 Overview of this work	20
2 Design considerations for interactive exploration environments	23
2.1 Introduction	23
2.1.1 Technological issues	23
2.1.2 Application issues	25
2.1.3 Scientific issues	25
2.1.4 Test cases	25
2.2 Car crash simulation playback	26
2.2.1 Implementation	26
2.2.2 Experiences	27
2.3 The Virtual Radiology Explorer	29
2.3.1 The radiology department	29
2.3.2 Desktop visualization	31

2.3.3	VRE objectives	32
2.3.4	Visualization and interaction methods in VRE	32
2.3.5	Implementation	35
2.3.6	Experiences	39
2.4	Diffusion and flow limited biological growth	42
2.4.1	Background	42
2.4.2	Analysis of simulation results	43
2.4.3	Interactive exploration in Virtual Reality	44
2.4.4	Exploration in the CAVE	46
2.4.5	Discussion	47
2.5	Summary and conclusions	47
3	The UvA-DRIVE virtual reality system	51
3.1	Introduction	51
3.2	Requirements and considerations	52
3.3	Design options for a VR architecture	53
3.3.1	Multi user stereoscopic display	54
3.3.2	High performance 3D graphics adapters	56
3.3.3	Tracking and input devices	60
3.3.4	Software availability	60
3.3.5	Computing hardware	62
3.4	The design of UvA-DRIVE	63
3.4.1	Top-bottom stereo with CAVELib	63
3.4.2	Performance measurements	64
3.5	Conclusions	65
4	Enabling technology for interaction in virtual environments	67
4.1	Introduction	67
4.1.1	Increasing awareness through interaction	67
4.1.2	Interaction methods	68
4.2	Interactive scientific visualization in VEs	71
4.2.1	The Visualization Toolkit	71
4.2.2	SCAVI: Speech, CAVE and Vtk Interaction	73
4.3	Bridging the gap: 2D applications in VEs	75
4.3.1	XiVE: X in Virtual Environments	76
4.3.2	Design of XiVE	76
4.3.3	Performance issues	78
4.3.4	Conclusions	80
4.4	Context sensitive interaction	81
4.4.1	Determining application context	82
4.4.2	Context sensitive speech recognition	83
4.5	GEOPROVE: Geometric Probes for Virtual Environments	86
4.5.1	Related work	86
4.5.2	Geometric probing	87

4.5.3	Position accuracy of the SARA CAVE tracking sensors	91
4.5.4	Results	93
4.5.5	Conclusions	95
4.6	Summary and conclusions	95
5	Interactive dynamic exploration environments	97
5.1	Introduction	97
5.2	High performance interactive simulation	98
5.2.1	Update and response time	99
5.2.2	Pipelined execution	99
5.3	Distributed simulation and visualization	101
5.3.1	Execution environment	101
5.3.2	Data distribution	102
5.3.3	Attribute ownership	102
5.3.4	Time management	102
5.4	Communication architectures	103
5.4.1	The High Level Architecture	103
5.4.2	SPLICE	108
5.4.3	The Virtual Laboratory and the Data Grid	112
5.4.4	Concluding remarks on communication architectures	113
5.5	High throughput communication using CAVERN	114
5.5.1	Hiding latency by using multiple connections.	115
5.5.2	Data volume reduction	115
5.5.3	Performance of the network communication pipeline	116
5.5.4	Conclusions	117
5.6	Summary and conclusions	118
6	Simulated vascular reconstruction in a virtual operating theatre	119
6.1	Introduction	119
6.1.1	Abdominal vascular reconstruction	119
6.1.2	What is needed?	120
6.2	The lattice Boltzmann method for flow simulation	121
6.2.1	Performance of the parallel LBM flow simulation kernel	122
6.2.2	LBM grid generation	124
6.2.3	LBM grid generation from medical data sets	125
6.2.4	LBM grid generation and editing from polygonal data	126
6.2.5	Interactive LBM grid editing in a VE	130
6.3	Interactive 3D flow visualization in VEs	131
6.3.1	Global flow visualization methods	132
6.3.2	Local flow visualization methods	132
6.3.3	Results	133
6.4	Summary and conclusions	133

7 Summary and concluding remarks	135
7.1 Summary	135
7.2 Concluding remarks	137
A The CAVE library	141
A.1 Interprocess communication in a CAVELib application	141
References	145
Samenvatting	167
Publications	171
