Acknowledgements

This thesis concludes five years of hard work. It has been a truly wonderful experience which was fun and enlightening. I would like to thank both my promotores, Frank Linde and Marcel Demarteau, for offering me the opportunity to reach this goal.

The first part of my PhD work I spent at Fermilab, where I had the privilege to work with very smart people. In the first couple of years, when I was working hard on making the muon software work, Daria Zieminska was a great inspiration. Rick van Kooten and Brad Abbott proved to be invaluable sources of information on how to do a b-jet cross section analysis. Marcel Demarteau helped a lot, by asking all the probing questions about all the small details I would have never thought of. I also would like to thank all the other PhD students who were there at the time for making the time there fun both at work and away from work. I especially would like to thank Bram Wijngaarden here, for all the good meals he cooked, and for being an absolutely great roommate.

The last two years I worked back at NIKHEF to finalize my analysis and work on this thesis. Here, Marcel Vreeswijk proved to be a great person to work with. Especially in the last phase he provided me with a lot of guidance and help, and gave good tips if things looked bleak. The discussions we had about the most intricate details of the analysis really helped me forward.

A valuable help has also been Paul de Jong. I could always just walk into his office and discuss things, and get useful feedback. Eric Laenen provided me with a lot of help on the theoretical side of things, and would always answer any questions I had.

I really would like to thank my PhD office mates, Paul Balm and Lukas Phaf. It has been a wonderful time working together with you, first at Fermilab, then during the analysis and thesis stage back at NIKHEF. You both provided me with good advice and help, and it has been a privilege working together with you. I really enjoyed many of the discussions we had, both about work and other things. I wish you both so much luck with finishing your theses, though I am sure that you will do fine.

In this entire process of getting my PhD my parents have always stood behind me, providing me with advice, love and support in the easy and in the difficult times. It is unmeasurable what you have given me.

Finally I would like to thank all my family and friends who have supported me over
the years. I couldn’t have done it without you.
