Acknowledgements

Like most quests, mine has been a lonely one. Fortunately, there were numerous places to rest a little and many persons have contributed to this project by their support and encouragement. If the names of these persons are not mentioned here, then this is for reasons of limited space only, not because of the fact that their concern or diversion was not appreciated.

I would like to thank my promotors Anne Baker and Kees Hengeveld and the members of my committee: Hans Bennis, who probably had different ideas about my thesis the first time that I told him I wanted to write one -- I hope, I have not disappointed him - Fred Weerman, Pieter Muysken, and Roland Pfau and Josep Quer, who both gave many comments which highly improved the quality of the manuscript.

I would like to express my gratitude to Inge Zwitserlood, my sister in sign linguistics, who is making her own quest to find the ultimate classifier construction. Quite often our quests intersected. This gave us the opportunity to unite our forces and carry out a quest on agreement together, and to be able to get our regular dose of professional gossip and fun of course.

I would also like to express my gratitude to Hans den Besten, who always had time to help me when needed and whose wide linguistic knowledge is priceless, and to David Wilkins, from whom I benefited a lot during the first stages of this study.

This study would not have been possible without the help of the following institutes. The Max Planck Institute for Psycholinguistics for being so kind to make available their laboratory and for their financial support. The UiL-OTS for arranging a place to stay whenever my quest brought me to Utrecht and for facilitating the copying of my material. The Netherlands Organisation for Scientific Research and the European Science Foundation for the financial support of my six-month stay in London. Special thanks to Bencie Woll, Gary Morgan, and Klimis Antzakas for all the other support during this stay, and to
Keetje van den Heuvel and Frank Drijkoningen of UU-OTS, who supervised the publication of this study and jogged my memory whenever I seemed to forget something important.

I would also like to thank the deaf informants Alinda Höfer, Johan Ros, and Eric Stoel. Working with them was great. They have taught me many things about their language, even more than what is published here. Besides that, we also had a lot of fun together.

One person that can only be thanked here is Joost van Driel, who has been my Camelot almost throughout this study. I can only hope that I have given him as much support and love as he has given me.

Last but not least, I like to thank my two paranimjen Daniëla Lankers and Ellie van den Bosch. Their support and their encouragements, especially during the last stages were essential and invaluable – thank you!
