Chapter 13

THANK YOU!

In the Talmud, it says somewhere that everybody has its angels and everybody is somebody's angel. I am very lucky, in the sense that I have many such angels. Their kind and often unselfish help to this work is more than appreciated.

In the first place I want to thank my promotor Prof. Franse; in the truest sense "a professor and a gentleman". Thank you for so many things! Prof. De Châtel I would like to thank in particular for our many battles in wit, mind and ideas. Be aware he has a secret weapon, his reading glasses. He has such an elegant way of playing with them that one can get totally distracted. I am grateful to Anne for his help. To Prof. Maan I am thankful for his patience.

It is in particular Jan's fatherly guidance and his personal interest which saved the day more than once. He will recognize many of the arguments and formulations. Your help and support, our discussions on physics, other personal matters and the meaning of bitterballen are memorable. Thank you!

Herko, I really enjoyed our teamwork. In my book you are one of the greatest wizards with inserts. Thank you for teaching me some of your magic. I hope you did not find my theorizing too boring.

And then there is good old Peter for whom no experimental ocean is too wide. I really enjoyed our large Chinese dinners with the sousing music of running magnets in the background.

Uli, for me you are the uncrowned king for getting the most Tesla's out of the amount of cooling power available and cutting experimental corners in the safest way (although you should maybe stop doing it with Helium vessels). Thank you for letting me profit from your talents.

Then there are the guardian angels of the magnet laboratory; Jos Rook Lijnis Nelemans, Harry Balster, Hung van Luong and Martha. In particular I want to mention here Klaas van Hulst, who I will remember as one of the kindest persons I ever met. They were always willing to help me, even with the stupidest of problems.

To Elma and Jos I am thankful for helping me with computer and personal crises

Ton, my friend, how are your feelings, printer-wise? And Marc never forget, do not feed other people's monkeys too much. Sjoerd I miss our discussions about physics and the meaning of it all. I hope you find all the glory you deserve.

To George Bruls, I am still thankful for his invitation to Frankfurt. I share his taste in simplicity and elegance.

Sasha, I still remember that you stopped me in my tracks on the large staircase at the Van der Waals Zeeman laboratory speaking words along the lines of "Let's not care what other people think and just do it". Thank you for teaching me the basics in mental-pirating skills.

To John Singleton and Andrey Geim I am thankful for taking the time to discuss.

It is in particular Sigi Straessler, the smartest brain in the west, which I want to thank for taking a closer look at my ideas and taking them a step further. It was a privilege to see the master at work.

I also want to mention all those fellow workers not already mentioned, who, over the years, turned into good friends, such as: Niels, Alex, Benno, Maaïke, Magteld, Ceciel, Fausto, Cecilia, Fausto, Joop, Freddy, Jan and many more. It is hard to thank you all at this place, but please do not think I forgot you.

A special place in all this is taken by Judith.

Daddy, I would like to thank you for not just being my father. Hein, thank you, and not just for making the fourth of July such an unforgettable day. Thank you! Marianne, I am looking forward to seeing you again. Thomas, Stella, Hans and Linde you heard the story of my thesis so many times. Thank you, for being so patient with me.

I only just started, there are many more angles. It would be almost undoable to thank them all. Therefore I would like to finish with a general, and well meant,

THANK YOU!!!
