Erratum:

Two data points are not shown in figure 1 of section 3.2, pp 71.

These dots represent two methadone patients with an observed FEV₁ value of 2.7 and 3.0 litre less than the expected FEV₁ value and a heroin exposure category value of 0.7 and 1.0, respectively.

The correct figure (including these two cases) is:

*black dots: methadone patients reporting dyspnoea*
