Acknowledgements

This study is the result of four years of research carried out in the frame of a Ph.D. programme offered by the Faculty of Science of the University of Amsterdam. I am grateful to the Netherlands Foundation for the Advancement of Tropical Research (WOTRO, grant number WB 75-368) for its financial support during the entire period of this study. I am in eternal debt with my two supervisors Henry Hooghiemstra (University of Amsterdam) and Sarah Metcalf (University of Edinburgh) for their incredible guidance and supervision during these four years. I would like to thank all the members of the Faculty of Sciences (UvA) for all their help, particularly Bas van Geel, Nico de Wilde, Antoine Cleef, Guido van Reenen, Joost Duivenvoorden, Betty Bijl, Ada Hoogendorp and Jody dos Santos. I want to thank particularly Henry Hooghiemstra and Bas Van Geel for producing the “samenvatting” for this thesis. I am very grateful to Annemarie Philip for her help with the preparation of the diatoms, delicious tea and incredible emotional support. I want to thank my colleagues Juan Carlos Berrio, Maarten Blaauw, María Victoria Arbelaez, Vladimir Torres, Rob Marchant and special thanks to Michael Wille. In Colombia, I thank Michel Hermelin, José Ignacio Martínez, Ligia Urrego, Edgar Arbeláez and Luisa Fernanda Herrera. In Amsterdam I would like to thank my friends Maurits, Lola, Silvio, Fred, Gina, Pete and Maria V. and my special thanks to Conny van der Molen and Wilbert Koning who were always there when I needed them. I would like to thank my family Vélez-Londoño in Colombia. I was able to be a full time student thanks to my husband Carlos David, who was directly involved with this research not only emotionally but also academically. His active participation in the editing part, his motivation with the research and his willingness to take care of our son Joche for entire days, allowed me to be a happy full time student.
