If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
Contents

1 Introduction ................................................. 9
  1.1 Single scattering ........................................... 9
  1.2 Multiple scattering ......................................... 10
  1.3 Weak localization .......................................... 12
  1.4 Anderson localization ...................................... 15
  1.5 The history of localization .................................. 19
  1.6 How to localize light ....................................... 21
  1.7 This thesis .................................................. 22

2 Propagation of light in disordered scattering media ......... 25
  2.1 Coherent beam .............................................. 25
  2.2 Diffusive propagation ....................................... 27
   2.2.1 The radiative-transfer equation and the diffusion approxi-
         mation .................................................. 27
   2.2.2 Boundary conditions: internal reflection ............... 28
   2.2.3 Angular-resolved transmission ......................... 32
   2.2.4 Total transmission and reflection ...................... 33
   2.2.5 Dynamic transmission .................................. 37
  2.3 Enhanced backscattering .................................... 38
  2.4 Anderson localization ...................................... 42

3 Near infrared transmission through powdered samples ... 47
  3.1 Introduction .............................................. 47
  3.2 Sample preparation ......................................... 49
  3.3 Experimental set-up ........................................ 51
  3.4 Total transmission through Si samples ................... 52
  3.5 Total transmission through Ge samples .................... 55
  3.6 Discussion .................................................. 59
4 Midinfrared transport of light in Ge powders close to the localization transition
4.1 Introduction ............................................. 61
4.2 Sample preparation ........................................ 63
4.3 Static measurements ....................................... 65
  4.3.1 Coherent beam transmission ......................... 65
  4.3.2 Total transmission and reflection ..................... 67
  4.3.3 Discussion ........................................... 72
4.4 Time-resolved speckle interferometry ..................... 73
4.5 Photoacoustic spectroscopy ............................... 77

5 Porous GaP: formation and optical properties .............. 81
5.1 Introduction ............................................. 81
5.2 Optical experimental techniques ........................... 83
5.3 Pore formation by anodic etching .......................... 84
  5.3.1 Current-potential characteristics ...................... 85
  5.3.2 Formation of porous layers ............................. 87
5.4 Optical absorption in anodically-etched GaP .............. 90
5.5 Removal of the top layer by photochemical etching ....... 91
5.6 Scattering strength versus doping concentration and etching potential ........................ 94
5.7 Increase of the scattering strength by chemical etching ..... 98
5.8 Discussion ............................................... 101

Appendix A: energy density coherent potential approximation. 105
Appendix B: extrapolation length with an absorbing layer. 107
List of symbols ............................................. 109
List of abbreviations ........................................ 113
References .................................................. 115
Summary .................................................... 125
Samenvatting ............................................... 129
Resumen ..................................................... 133
Dankwoord .................................................. 137
