ACKNOWLEDGEMENTS

This study is the result of a research project that started in 1996 and is part of the research program Financial Accounting and Assurance of the Department Accountancy and Information-management at the University of Amsterdam. The completion of this study was encouraged by various quarters throughout the more than six years that passed by since its inception. It is a pleasure to use this occasion to acknowledge the people who supported me:

I thank my supervisors Martin Hoogendoorn and Henk Langendijk for their guidance, patience and support. Their help and advice have been very important over the years. In addition to being stimulating supervisors I enjoyed working with them. This study has also benefited from the ideas, criticisms and contributions of my fellow PhD student and colleague Bart van Praag. I also thank my fellow PhD student Patrick Klijnsmit. The discussions the three of us had in the Amsterdam Academic Club were not only helpful but very pleasant as well. Further, I thank Dick van Offeren who provided his collection of financial statements. In the final stages helpful comments were received from the committee members Auke de Bos, Gerard Mertens and Philip Wallage. Helpful comments were also received in the final stages from Ada Alkemade-van Rooijen. None of the acknowledgements are, of course, intended to shift the responsibility for the contents of this study. I alone am responsible for any errors or misinterpretations.

Finally, thanks are due to those who have not participated directly in this study, but who have in their own ways contributed to the completion of it. I thank my colleagues at MarketXS.com for creating a pleasant working atmosphere and allowing me time off every now and then to further this study. My family, Mr and Mrs Van Went, and especially my parents have always been an important source of inspiration and I thank them for all their support. I also especially wish to thank Leontien. Her no-nonsense attitude, encouragement and love have stimulated me enormously over the years. Last but not least I thank my daughter Florence.

Jan van Rooijen
