Acknowledgments

What a happy surprise! Before I know it, my study years are over and the book is ready. I now realize the last few years as a PhD student have indeed been the best times of my academic life. It is a real pleasure to thank the many people who have contributed in one way or another to the book. Above all I have to thank my supervisor Jan De Gooijer. It was Jan who first introduced me to the field of nonparametric econometrics. At the beginning I found this research area very tough. I was not even sure if I could manage it. But the strategy Jan advised me to follow was a very practical one. In just a couple of months, I already started to appreciate the good flavour of nonparametrics. Now I can comfortably say that the thesis project was interesting. I was lucky to have Jan de Gooijer as my supervisor.

The second very important person I like to thank is Ali Gannoun. Ali as a mathematician thought me some of the tricks in nonparametric statistics. He invited me twice for a visit to his former university at Montpellier, France. It was a great experience for me. His wife, Leila and their children were unbelievably good to me during my stay in Montpellier. As a member of the promotion committee, Ali's comments in the final version of the thesis were also very useful. I am grateful to the other members of the promotion committee, J.G. Bethlehem, P. Boswijk, C.A.J. Klaassen and A.H.O. van Soest, for reading the entire manuscript and providing useful comments and suggestions. I also like to thank Rob Hyndman from Monash University and Zongwu Cai from the University of North Carolina for reading and commenting on chapter 4. Apart from the editors and anonymous referees of Journal of Forecasting, Statistics & Probability Letters, Communications in Statistics: Theory and Methods and Proceedings of the Statistical Computing Section and the Section on Statistical Graphics of the American Statistical Association, I would like to thank the participants of the workshops and conferences I have attended for their comments and suggestions on earlier versions of various chapters.

Very special thanks goes to the Tinbergen Institute (TI) which financed my PhD study. I am grateful to Marian Duppon-Cohen who is the secretariat staff of TI in Amsterdam. I also thank Martin Lindeboom for being very supportive in his yearly evaluations and valuable feedbacks. I thank many colleagues and friends for a whole variety of different contributions. I apologize in advance to anyone inadvertently missed out, but I would particularly like to thank Tesfaye Tiko, Naud van Giersbergen, Maurice Bun, Biniam Fekadu, Berket Ogbaumichael, Remzi Sadik, Sebastiano Manzan, Lennart Jansens, Pedro Cardoso, Juan Caceras, Mathias van Vellen, Henk van Velden, Arjen Siegmann, Gerwin Griffioen, Jan Tuinstra, Angela Heerwaarden, Cees Diks, Florian Wagner, Andre Klein,
Andries Jansen, Frank Kleibergen and Tio Euverman. I am also very grateful to all members of the Quantitative Economics (AKE) group at the University of Amsterdam. Outside AKE, I thank Andrea Timmer from Personeel en Organisatie for being very helpful in dealing with administrative matters.

Finally, my biggest debt, as always, is to my family. This book would never have been written without the love and moral support of my parents, brothers and sisters. I am grateful to Kibreab Tesfaye for his encouragement and advise. I also do not want to miss the opportunity to thank my family and friends in Cincinnati, Ohio for their warm welcome every time I am in town.

Dawit
Amsterdam, January 2002
