Contents

General Introduction

Part I: Premature Atherosclerosis in FH: a single gene disease

Chapter 1
Familial Hypercholesterolemia: premature cardiovascular complications to expect and to prevent.

Chapter 2
Molecular genetic testing for Familial Hypercholesterolemia: spectrum of LDL receptor gene mutations in the Netherlands.

Chapter 3
Differences in intima-media thickness in the carotid and femoral arteries in Familial Hypercholesterolemia heterozygotes with and without clinical manifestations of cardiovascular disease.

Chapter 4
Effect of aggressive versus conventional lipid lowering on atherosclerosis progression in Familial Hypercholesterolemia (ASAP): a prospective, randomised, double-blind trial.

Chapter 5
Differential hs-CRP reduction in patients with Familial Hypercholesterolemia treated with aggressive or conventional statin therapy.

Chapter 6
Effect of atorvastatin (80mg) and simvastatin (40mg) on plasma fibrinogen levels and on carotid intima media thickness in patients with Familial Hypercholesterolemia.
Chapter 7
Effects of simvastatin on coagulation, fibrinolysis and intima media thickness in patients with Familial Hypercholesterolemia.

Chapter 8
A frequent mutation in the lipoprotein lipase gene (D9N) deteriorates the biochemical and clinical phenotype of Familial Hypercholesterolemia.

Part II: Premature atherosclerosis: a complex genetic disorder

Chapter 1
Platelet hyperreactivity and prognosis in survivors of myocardial infarction.

Chapter 2
The platelet GP IIa polymorphism; its relation to coronary artery disease and its response to aspirin.

Chapter 3
Genetic variation of the haemostatic system as risk factors for arterial thrombotic disease.

Chapter 4
The 20210 G → A mutation in the 3'-untranslated region of the prothrombin gene and the risk for arterial thrombotic disease.

Chapter 5
Frequent mutation in the ABCC6 gene (R1141X) is associated with a strong increase in the prevalence of coronary artery disease.
Chapter 6
Thrombospondin mutations are not associated with premature atherosclerotic vascular disease.

Chapter 7
Prevalence of hereditary haemochromatosis in premature atherosclerotic vascular disease.

Chapter 8
The effect of a common methylenetetrahydrofolate reductase mutation on levels of homocysteine, folate, vitamin B12 and on the risk of premature atherosclerosis.
