You will be contacted as soon as possible.
# Table of contents

## Part 1 INTRODUCTION
1.1 General introduction, outline and summary 9
1.2 Predation by insects and mites 17

## Part 2 INDIVIDUAL LEVEL
2.1 Comparative life history studies of *Frankliniella occidentalis* and *Thrips tabaci* (Thysanoptera: Thripidae) on cucumber 89
2.2 Pollen as food for the predatory mites *Iphiseius degenerans* and *Neoseiulus cucumeris* (Acari: Phytoseiidae): dietary range and life history 111
2.3 The contribution of extraloral nectar to survival and reproduction of the predatory mite *Iphiseius degenerans* on *Ricinus communis* 127
2.4 Does satiation-driven behaviour alone explain observed predation rates? 141
   [P.C.J. van Rijn, F.M. Bakker, W.A.D. van der Hoeven & M.W. Sabelis, submitted]
2.5 How additional food affects the functional and numerical response of a predator 165
   [P.C.J. van Rijn, P. van Stratum & M.W. Sabelis, submitted]

## Part 3 POPULATION LEVEL
3.1 How plants benefit from providing food to predators even when it is also edible to herbivores 183
3.2 Persisting high predator-to-prey ratios and low prey levels: Model and experiments with thrips and predatory bugs 209
3.3 Alternative food, switching predators, and the persistence of predator-prey systems 237
