You will be contacted as soon as possible.
Contents

Chapter 1  Introduction .................................................. 1
1.1  Historical summary .......................................... 1
1.2  Fourth-generation permanent magnets .............. 2
1.3  Composite permanent-magnet materials ....... 4
1.4  Review of experimental studies of nanocomposite permanent magnet .... 5
1.5  Motivation of the present work ....................... 8
References ......................................................... 9

Chapter 2  Theory of nanometer exchange coupling ......... 11
2.1  One-dimensional model ..................................... 11
2.2  Effect of exchange coupling on the macro-magnetic properties .......... 14
2.3  Three-dimensional theory .................................. 16
References ......................................................... 19

Chapter 3  Experimental methods .................................. 21
3.1  Sample preparation ........................................... 21
3.2  Structure, microstructure and phase analysis 23
3.3  Magnetic measurements ..................................... 25
References ......................................................... 26

Chapter 4  Effect of exchange coupling in nanocomposite two-phase Nd-Fe-B magnets .................. 27
4.1  Introduction ................................................... 27
4.2  Experimental .................................................. 29
4.3  Results and discussion .................................... 29
   4.3.1  Effect of the grain size on the exchange coupling .......... 29
   4.3.2  Effect of the magnetocrystalline anisotropy of the hard-magnetic phase on the exchange coupling ........ 36
4.4  Conclusions .................................................. 43
References ......................................................... 44
Chapter 5  Effect of nanoscale exchange coupling in CoPt bulk magnets ........................................... 47
5.1  Introduction ......................................................... 47
5.2  Experimental ....................................................... 49
5.3  Effect of annealing on the disorder-order transformation ...................................................... 50
5.4  Effect of the ordering transformation on the magnetic properties ........................................... 58
   5.4.1 Curie temperature ......................................... 58
   5.4.2 Magnetocrystalline anisotropy ....................... 60
   5.4.3 Magnetic hardening process ......................... 60
   5.4.4 Effect of nanoscale exchange coupling .......... 62
5.5  Conclusions .......................................................... 67
References .................................................................. 68

Chapter 6  Ordering transformation and magnetic properties of Fe\textsubscript{59.75}Pt\textsubscript{39.5}Nb\textsubscript{0.75} bulk alloy .... 69
6.1  Introduction ......................................................... 69
6.2  Experimental ....................................................... 71
6.3  Results and discussion ......................................... 71
   6.3.1 Effect of homogenization temperatures and cooling rates ......... 71
   6.3.2 Effect of annealing on the phase transformation and magnetic properties ....................... 86
6.4  Conclusions .......................................................... 101
References .................................................................. 103

Summary ................................................................... 105

Samenvatting ........................................................... 109

Publications in connection with this thesis work .......... 111

Acknowledgements .................................................... 113
