You will be contacted as soon as possible.
Contents

1 Introduction 1
  1.1 Image Segmentation ........................................... 2
  1.2 Research Directions ........................................ 2
  1.3 Thesis Outline ............................................... 3

2 Review of Methods for the Interactive Segmentation of Medical Images 5
  2.1 Introduction .................................................. 6
  2.2 Interactive Segmentation .................................... 7
    2.2.1 Characterization of Interactive Segmentation Methods ........................................... 7
    2.2.2 Review of Interactive Segmentation Methods ......................................................... 11
    2.2.3 Examination of Interactive Segmentation ................................................................. 14
    2.2.4 Discussion .................................................. 16
  2.3 Deformable Model Methods ................................... 17
    2.3.1 Characterization of Deformable Model Methods ....................................................... 17
    2.3.2 Review of Deformable Model Methods ................................................................. 19
    2.3.3 Examination of Deformable Model Methods ........................................................... 27
    2.3.4 Discussion .................................................. 31
  2.4 Research Questions .......................................... 32

3 Strings: Variational Deformable Models of Multivariate Ordered Features 33
  3.1 Introduction .................................................. 34
  3.2 Related Work ................................................ 34
  3.3 Strings by Functional Data Analysis ........................ 37
    3.3.1 Feature Function Definition ........................................... 38
    3.3.2 Feature Function Alignment ........................................ 39
    3.3.3 Feature Space Reduction ......................................... 40
    3.3.4 Principal Components Regression ...................................... 41
    3.3.5 Mahalanobis Distance ........................................ 42
    3.3.6 Stochastic Outlier Removal ..................................... 42
    3.3.7 Deformable Strings ........................................... 43
    3.3.8 Optimization ................................................. 44
