You will be contacted as soon as possible.
Contents

Chapter 1 Prologue 9

Part 1: Peripheral T cell turnover

Chapter 2 Introduction 15

Chapter 3 Increased T cell turnover in HIV-1 infection is mainly due to chronic immune activation: a longitudinal analysis in patients before and during highly active anti-retroviral therapy. Blood 2000;95:249-255 21

Chapter 4 Discordant responses during antiretroviral therapy: role for immune activation and T cell redistribution rather than true CD4 T cell loss. AIDS 2002:16:1287-1289 37

Chapter 5 Persistent immune activation in HIV-1 infection is associated with naive T cell depletion and progression to AIDS. Submitted for publication 45

Part 2: Thymic function

Chapter 6 Introduction: Tilted balance of T cell renewal in HIV-1 infection. AIDS Reviews 1999:1:67-73 61

Chapter 7 Increased cell division but not thymic dysfunction rapidly affects the T cell receptor excision circle content of the naive T cell population in HIV-1 infection. Nature Medicine 2000:6:1036-1041 75
Chapter 8  T cell receptor excision circles (TRECs) as markers for recent thymic emigrants. Basic aspects, technical approach, and guidelines for interpretation  
J Molecular Medicine 2001:79:631-640

Chapter 9  T cell dynamics in HIV-1 infected children: a longitudinal study on TRECs, T cell numbers and peripheral T cell division before and during antiretroviral therapy  
Manuscript in preparation

Chapter 10  Depletion of naive CD4+ T cells by syncytium inducing, CXCR4 using HIV-1 variants occurs mainly through increased peripheral T cell death rather than thymic dysfunction  
Submitted for publication

Chapter 11  T cell receptor excision circle (TREC) and T cell dynamics after allogeneic stem cell transplantation are related to clinical events  
Blood 2002:99:3449-3453

Chapter 12  T cell depletion in HIV-1 infection: how CD4+ T cells go out of stock  
Nature Immunology 2000:1:285-289

Chapter 13  Epilogue
