Disclaimer/Complaints regulations

If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: <https://uba.uva.nl/en/contact>, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.

Contents

Introduction	1
1 Cosmic ray acceleration and neutrino production	5
1.1 Cosmic rays	5
1.1.1 Shock acceleration	6
1.2 Neutrinos	8
1.2.1 Neutrino production	8
1.2.2 Candidate neutrino sources	9
1.2.3 Other sources of neutrinos	11
1.2.4 Effect of neutrino oscillations on the flux	12
2 The ANTARES detector	15
2.1 High energy neutrino telescopes	15
2.1.1 Detection principle	15
2.1.2 Cherenkov radiation	18
2.2 The ANTARES detector	18
2.3 Data acquisition and calibration	20
2.3.1 Clock system	20
2.3.2 Hit digitisation	21
2.3.3 Data transport and processing	22
2.3.4 Calibration	23
2.4 Sector line	25
2.5 Sector line dark room results	25
2.5.1 TVC calibration	26
2.5.2 Time offsets	26
2.5.3 Time resolution	28
2.6 Results from the deployed sector line	30
2.7 Epilogue	31
3 Physics and detector simulation	33
3.1 Monte Carlo scheme and event weighting	33
3.2 Event generation	36
3.2.1 Neutrino interactions	36
3.2.2 Neutrino absorption in the Earth	39
3.2.3 Muon propagation	40

3.3	Detector simulation	41
3.3.1	Cherenkov light	44
3.3.2	Simulation of the hardware	46
3.4	Light detection	47
3.4.1	Effect of the front-end electronics	49
3.5	Background	50
3.5.1	Background photons	50
3.5.2	Atmospheric muons	51
3.5.3	Atmospheric neutrinos	51
4	Muon Track Reconstruction	55
4.1	Track description and relation to the OM	55
4.2	Linear prefit	57
4.2.1	Hit positions	58
4.2.2	Constraining the muon velocity	58
4.2.3	Performance	59
4.3	Maximum likelihood fit	59
4.3.1	Original PDF	60
4.3.2	Performance	61
4.4	Maximum likelihood fit with improved PDF	62
4.4.1	PDF with background	62
4.4.2	Parameterisation of the PDF	62
4.4.3	Performance	66
4.5	M-estimator	67
4.5.1	Performance	68
4.6	Combining the fitting algorithms	68
4.7	Performance of the full algorithm	70
4.7.1	Handles on the reconstruction quality	71
4.7.2	Error estimates	72
4.8	Energy reconstruction	76
4.9	Outlook and conclusion	76
5	Background rejection and detector performance	79
5.1	Event selection	79
5.1.1	Signal and background	79
5.1.2	Selection criteria	80
5.1.3	Cross-check with high energy multi-muons	83
5.2	Detector performance	83
5.2.1	Effective area for muons	84
5.2.2	Effective area for neutrinos	85
5.2.3	Angular resolution	85
5.2.4	Response curves	86
5.2.5	Well reconstructed atmospheric muons	88
6	Point source searches	91

6.1	Introduction	91
6.2	Binned methods	92
6.3	Likelihood ratio search method	96
6.3.1	Motivation	96
6.3.2	Hypothesis testing	96
6.3.3	Likelihood ratio test statistic	97
6.3.4	Expressions for the likelihood	99
6.3.5	Ingredients of the likelihood calculation	101
6.3.6	Likelihood maximisation	103
6.4	Full sky search	104
6.4.1	Distribution of the test statistic	104
6.4.2	Examples	106
6.4.3	Fitted source position	107
6.4.4	Discovery potential	108
6.4.5	Exclusion limit	109
6.5	Fixed point searches	111
6.5.1	Distribution of the test statistic	111
6.5.2	Discovery potential	112
6.5.3	Upper limits	114
6.6	Discussion	114
6.6.1	Comparison with models and experiments	116
A	Unbinned likelihood	119
	References	121
	Summary	127
	Samenvatting	129
	Dankwoord	133
