prof. dr. G.B. Woelk

Faculteit der Maatschappij- en Gedragswetenschappen
This PhD project was part of the research programme of the Amsterdam Research Institute for Global Issues and Development Studies (AGIDS) and of the Research School for Resource Studies for Development (CERES), where it formed part of the working programme ‘Health, well-being and population dynamics’.

Financial assistance for part of the fieldwork, some earlier publications and participation in international conferences came from the Nordic Africa Institute in Uppsala, Sweden, where the research belonged to a larger research programme, entitled ‘The political and social context of structural adjustment in Africa’.

Assistance also came from ETC Crystal, the company at which the author is currently working as an international consultant on health systems research and development. ETC Crystal forms part of ETC Foundation, which has its base in Leusden, The Netherlands. ETC Crystal provides public health consultancy services in the area of health sector reforms, sector-wide approaches for health development and health programme design, management and evaluation in various countries and for a variety of clients.
