ACKNOWLEDGEMENTS

Sincere thanks to all those who have helped me to complete this thesis. First and foremost, to my supervisor, Peter Schoenmakers, for his constant encouragement, patience, good humour and bad jokes and for all that he has taught me over the last four years (scientific and otherwise) - though I guess I am a lost cause when it comes to hyphens! To my office mates, Simona, Remco and Monique – thank-you for helping to create such a nice atmosphere in the office and for putting up with my ‘organised’ chaos and never-ending cups of tea! Thanks also to the other AIO’s in the group: Michel, Emil, Kathalijne, Xulin, Maya, Bas E, Sander, Valentijn, Mauro and Wim D (thanks especially for help with Matlab figures) and to everyone in the Process Analysis group, between us all the fourth floor has been a very pleasant place to work. From the many visitors we have had over the last few years, thanks to Maria Jesus, Blanca, Tyan, Feng Ding, Nathalie, Yvan, Danson, José Manuel, Inger Lill, Jiri and Ruohua who have all contributed to the cheerful (not to mention international!) atmosphere in the group. Sincere thanks also to Wim Kok, Hans Poppe, Wybren Frankema, Thomas Hankemeier and Henk Lauer for always taking an interest in my work and for helpful suggestions and comments during the group meetings. For help in the laboratory, thanks goes to the analysts in the group, Rob O, Aschwin (also for helping me to move house so often!), Wim O, Sietske, Dini and Jaap E. To everybody else in the ITS, there are too many to mention by name but particular thanks is owed to Gooitzen and Jaap for computer help, Fred, Maureen, Renate and Ellen for help with administration work and Nicole for keeping the coffee room in order.

For specific contributions to the research work presented in this thesis, I would like to thank Rob Edam for his work on LC, Henk-Jan Ramaker and Hans Boelens from the Process Analysis group for lots of help with data analysis, Harry Philipsen, René Beerends and Michiel Verheggen from Océ in Venlo for help with LC-MS and Bas Staal (TU/e) for the MALDI measurements. Thanks also to prof. Klaus Albert, Heidrun Händel, Annette Lienau and Urban Skogsberg from the NMR group in Tübingen for their co-operation on the LC-NMR project and their hospitality during my stay in Tübingen.

Special thanks to my friends in Ireland and in Switzerland, for keeping in touch and for lots of fun visits to Amsterdam! Thanks also to my friends here, in particular Alison and Sonia from Dutch class, Daniel, Marco and my Donnellan Drive neighbour David Barrett (not only for all the fun nights in Café Belgique but also for providing a roof over my head when I (once again!) found myself homeless)
A very special word of appreciation to Miki Djordjevic, who first of all persuaded me to go back to university and then helped me to find such a nice group to work in - thank you! Last, but definitely not least, thank you to my family in Ireland, in particular my mother and my late father for their love, encouragement and support over the years, without which I would never have been able to get this far.

If there is anybody that I have forgotten to name, I apologise, but please be sure that your help was appreciated. To you all I say Bedankt voor alles!
