1 Introduction 1

2 The Realized Volatility of the Main Dutch (AEX) Stock Index 9
   2.1 Introduction ................................................. 9
   2.2 Time-change and volatility ............................... 11
   2.3 Description of the data .................................. 13
   2.4 Testing on i.i.d. normality ............................... 15
   2.5 The daily volatility cycle ............................... 23
   2.6 Variability of volatility ................................ 27
   2.7 Confrontation with some standard models .............. 31
   2.8 The relation between $B$ and $Q$ ......... 34
   2.9 Conclusions .............................................. 36

3 Testing the diffusion model for the S&P500 37
   3.1 Introduction .............................................. 37
   3.2 Financial time ........................................... 39
      3.2.1 Quadratic variation ................................. 40
      3.2.2 Increments of the process $X$ ...................... 41
      3.2.3 The data and some notation ....................... 43
   3.3 Testing the hypothesis ................................ 48
      3.3.1 The Tests ........................................... 48
   3.4 Dependence between financial time and the price process 54
   3.5 Conclusions .............................................. 56
# Table of Contents

## 4 Shocks in the S&P500
- 4.1 Introduction ........................................ 57
- 4.2 Data .................................................. 59
- 4.3 Piecewise linear approximation
  - 4.3.1 The algorithm ................................... 62
- 4.4 A probabilistic model
  - 4.4.1 The error process $E_A$ ....................... 67
  - 4.4.2 The number of breakpoints .................... 67
  - 4.4.3 Confidence intervals .......................... 74
- 4.5 Economic shocks .................................... 79
  - 4.5.1 Headlines of the Wall Street Journal and the New York Times ..................................... 80
- 4.6 Discussion .......................................... 87
  - 4.6.1 Bird’s eye view ................................ 87
  - 4.6.2 AEX .............................................. 88
  - 4.6.3 Model ........................................... 91
- 4.7 Conclusion ......................................... 92

## 5 Nonconvergence in the Variation of the Hedging Strategy of a European Call Option
- 5.1 Introduction ........................................ 95
- 5.2 The Model
  - 5.2.1 General setting ................................ 97
  - 5.2.2 The odd-even binomial model ................ 99
- 5.3 Hedging ............................................. 101
  - 5.3.1 Convergence of the hedging strategy .......... 101
  - 5.3.2 Continuous Hedging ............................ 101
  - 5.3.3 Discrete Hedging .............................. 102
- 5.4 Conclusion ......................................... 111

## References .............................................. 113

## Nederlandse Samenvatting ............................... 121

## Curriculum Vitea ........................................ 123
