# Contents

1 General introduction ................................. 1  
   1.1 Laser cooling ...................................... 2  
   1.2 Manipulating atoms using evanescent waves .......... 2  
   1.3 Loading scheme for evanescent-wave traps .......... 3  
   1.4 Bose-Einstein condensation ......................... 4  
   1.5 Interferometry .................................... 5  

2 Theory .................................................. 7  
   2.1 Propagating and evanescent light ................... 8  
      2.1.1 Plane waves, definitions and refraction phenomena . 8  
      2.1.2 Energy density and energy flow ................ 9  
      2.1.3 Evanescent waves ............................... 10  
      2.1.4 Effective evanescent-wave intensity .............. 12  
      2.1.5 Elliptically and circularly-polarized evanescent waves . 12  
   2.2 Description of diffraction limited beams ............ 13  
      2.2.1 Propagating beam equations .................... 13  
      2.2.2 Reflection and transmission .................... 14  
   2.3 Atoms and their interaction with light ................ 15  
      2.3.1 Two-level atoms ................................. 15  
      2.3.2 Multi-level atoms ................................ 17  
      2.3.3 Rubidium ..................................... 20  
   2.4 Van der Waals interaction .......................... 20  

3 Feasibility study for dipole traps at alternative wavelengths 25  
   3.1 Introduction ...................................... 26  
   3.2 Earlier QUEST experiments ........................ 26  
   3.3 Dipole polarizability tensor ........................ 29  
      3.3.1 Light shift .................................. 29  
      3.3.2 Dipole polarizability tensor ................... 30  
      3.3.3 Approximations of polarizability tensor ........ 32  
   3.4 Specific situation for rubidium ...................... 32  
      3.4.1 Discussion of unit systems ..................... 32  
      3.4.2 Dipole matrix elements and transition energies . 33  
      3.4.3 Comparison with experimental polarizability values . 36  
   3.5 Alternative QUEST wavelengths ..................... 36  
   3.6 Conclusions ..................................... 39
# CONTENTS

## 4 Experimental setup

4.1 Laser park ................................................. 42
   4.1.1 Frequency locked diode lasers: master and repumper .... 42
   4.1.2 MOT/molasses ......................................... 42
   4.1.3 Probe and depumper ................................... 45
   4.1.4 Non-resonant lasers .................................. 45
4.2 Evanescent wave alignment procedure ........................ 46
4.3 Vacuum setup .............................................. 47
   4.3.1 Setup for EW absorption experiments (chapter 6) .......... 47
   4.3.2 Setup for EW trapping experiments (chapter 7) .......... 49

## 5 Power-efficient frequency switching of a locked laser  

5.1 Introduction .............................................. 54
5.2 Experimental implementation ............................... 55
5.3 Analysis of transient behavior ............................. 57
5.4 Comparison with experimental data ......................... 59
5.5 Conclusions and outlook .................................. 61

## 6 Cold trapped atoms detected with evanescent waves

6.1 Introduction .............................................. 64
6.2 Evanescent wave calculations ............................... 64
6.3 Time of flight experiments ................................ 66
6.4 Trapping .................................................. 69
6.5 Conclusions and outlook .................................. 72

## 7 Analysis of an evanescent-wave dark-state trap

7.1 Low dimensional trapping .................................. 74
7.2 Experimental configuration ............................... 76
   7.2.1 Double EW trapping geometries .......................... 76
   7.2.2 Optical setup ......................................... 79
7.3 Pump field optimization ................................... 79
   7.3.1 Pump field geometry and polarization ................... 81
   7.3.2 Pump field intensity and decay length ................. 83
7.4 Optimization of trap parameters .......................... 84
   7.4.1 Potentials ............................................ 85
   7.4.2 Life time ............................................. 85
   7.4.3 Trapping fraction ..................................... 86
   7.4.4 Parameter optimization ................................ 89
   7.4.5 Consequences for the experiment ....................... 90
7.5 Probing considerations .................................... 91
   7.5.1 In-situ detection ..................................... 91
   7.5.2 Time of flight detection .............................. 92
7.6 Experimental set-back: prism roughness ..................... 92
7.7 Conclusions .............................................. 94
## CONTENTS

8 An atom interferometer using spontaneous decay 97

8.1 Introduction 98

8.2 Semi-classical description 99

8.2.1 Primary rainbow caustic 99

8.2.2 Supernumerary rainbows 100

8.3 Time-independent approach 103

8.3.1 Analytical stationary solutions 103

8.3.2 Spontaneous Raman transfer 104

8.3.3 Results and discussion 105

8.4 Time-dependent approach 106

8.4.1 Transfer-free evolution 107

8.4.2 Spontaneous Raman transfer 108

8.4.3 Results and discussion 109

8.5 Experimental considerations 111

8.5.1 Computational limitations - experimental implications 111

8.5.2 Rb levels and optical pumping 111

8.5.3 Distribution of the spontaneously emitted photons 112

8.5.4 Detection 112

8.6 Discussion and conclusions 113
