ACKNOWLEDGEMENTS

The completion of this thesis would not have been possible without the contribution of many people. Now it is the time to thank all of those who have influenced and contributed to this process. Unfortunately, it is impossible to mention everybody in a single page. Therefore, I would first like to thank all those who I am not going to mention here, but that surely have supported and encouraged me, either in my professional development or in my daily life.

This thesis would not have been possible without the contribution of the 12,222 participants, the many shopkeepers, and the NIPO interviewers coordinated by C. Janssen and F. van der Horst.

Further, I would like to thank “De Lotto”, not only for funding this project but also for the information that T. Veenstra and E. van Zon provided us during these years. Of course, my thanks also to the Supervising Board, that is the representatives of the addiction treatment centres and the Ministries of Health, Welfare and Sport and Justice, who warranted the scientific independence of this project. Additionally, I would like to thank: Prof. Hoogduin for his valuable comments in the development of the research protocol; A. Benschop for all the work that she invested at the beginning of this project; Prof. Bethlehem for his advice and assistance in the complex sampling design on the prevalence and incidence phases; and D. Borsboom for taking care of the Rasch analyses.

Thanks to my promoters and co-promoter, who offered me the chance to take over this project, and gave me all the support, motivation, patience, criticism and experienced advice that led to this manuscript. From you I got more than I could summarise in just a few lines. Wim van den Brink, I am still impressed with the thorough way in which you went through all the papers: “short, sharp and smart”. Your comments seriously contributed to the quality of the final product. Gerard Schippers, thanks a lot for always being there, making sure that I did not lose myself in the details and that the papers had a general line and structure. Maarten Koeter, if I have to describe the quality of your day-to-day supervision in psychometric terms, based on, of course, continuous confirmatory analyses, I would just say that it was excellent, with a very high validity and reliability (including weekends!). In short, the three of you were my “dream team” and working with you has been a pleasure and a great learning experience. Thanks a lot!

I would like to specially thank Prof. Van der Staak and Prof. Schaap for giving me the opportunity to come to the Netherlands and work at the KUN, and all the colleagues that I met there.

Many thanks also to my colleagues at the Amsterdam Institute for Addiction Research and at K&I for making a “gezellig” and inspiring working environment. Special thanks to Hans Kronemeijer for his editorial comments and kind, continuous assistance with my “small computer” problems, to Udo Nabiz for his nice e-mail support, and to Andrea van der Pouw and Bep de Lange for all their help during the preparations of this PhD thesis. My thanks also go to the members of the JOO (“Junior Onderzoeks Overleg”) for their fruitful comments on the draft of these papers and for sharing their methodological and scientific struggles.

A very big thanks to all my Spanish friends and colleagues, and to Pieter, Edith and Machtedt for their help and Dutch friendship. Eva and Vanesa, my dear “paranimfs”, thanks a lot for always being by my side and giving the support and advice that I was looking for.

Last but certainly not least, I would like to thank my parents, Hemi y Miguel Angel, because they were the first to encourage me to learn and who have supported and stimulated every decision in my life. Moreover, they have also given me the best present I could wish for, two wonderful brothers, Diego and Fernando, of whom I am very proud.

Guido, there are many things I can thank you for because you are always supporting and have shared in all the decisions, even though that sometimes meant that you were alone when I was working on this manuscript. Thanks for always checking with love whether I was “working hard or hardly working”.
