Contents

Voorwoord  i

1 Introduction 1
   1.1 The cell membrane ........................................ 2
   1.2 Lipids and lipid bilayers ................................. 3
   1.3 Computer simulations ..................................... 6
   1.4 This thesis .................................................. 8

2 Computer simulations 11
   2.1 Introduction ................................................ 12
   2.2 Dissipative Particle Dynamics ............................ 13
   2.3 Constant surface tension simulations .................... 15
   2.4 Inter- and intramolecular interactions ................... 16
      2.4.1 Repulsion parameters $a_{ij}$ .......................... 16
      2.4.2 Constructing lipids ................................... 17
      2.4.3 Reduced units .......................................... 18
   2.5 Testing the MC-DPD scheme ............................... 18
   2.6 Structural quantities of a lipid bilayer ................ 20

3 Phase behavior of monotail lipids 23
   3.1 Introduction ................................................ 24
   3.2 Computational details ..................................... 25
   3.3 Results and Discussion .................................... 26
      3.3.1 The lipid $ht^{\theta}$ .................................. 27
      3.3.2 Phase behavior as a function of tail length ....... 34
   3.4 Conclusions ................................................. 37

4 Coarse graining a phospholipid 39
   4.1 Introduction ................................................ 40
   4.2 Computational details ..................................... 41
   4.3 Parameter sets ............................................. 42
      4.3.1 Coarse-grained models .............................. 45
