If you believe that digital publication of certain material infringes any of your rights or (privacy) interests, please let the Library know, stating your reasons. In case of a legitimate complaint, the Library will make the material inaccessible and/or remove it from the website. Please Ask the Library: http://uba.uva.nl/en/contact, or a letter to: Library of the University of Amsterdam, Secretariat, Singel 425, 1012 WP Amsterdam, The Netherlands. You will be contacted as soon as possible.
Contents

1 Introduction

2 Hydrodynamics and the lattice-Boltzmann method
   2.1 Introduction ........................................ 5
   2.2 Phenomenological hydrodynamics equations .......... 5
   2.3 The Boltzmann equation ............................... 9
   2.4 Lattice Boltzmann equation .......................... 11

3 Introduction to electrokinetics
   3.1 The Poisson–Boltzmann equation and the electric double layer .... 19
   3.2 Electrokinetic phenomena ............................. 21
   3.3 Electrokinetic equations .............................. 24

4 Velocity fluctuations and dispersion in a simple porous medium
   4.1 Introduction ........................................ 27
   4.2 Description of the model ............................. 30
   4.3 Results ............................................... 31
   4.4 Conclusions .......................................... 39
   4.4 Initial rate of decay of the LVCF ..................... 41
   4.5 Computing Streamlines ................................ 42

5 Discrete solution of the electrokinetic equations
   5.1 Introduction ........................................ 43
   5.2 Numerical lattice method ............................. 45
   5.3 Boundary conditions ................................ 50
   5.4 Electrokinetic equations .............................. 52
   5.5 Validation tests ...................................... 53

6 Sedimentation velocity of highly charged spheres
   6.1 Introduction ........................................ 65
   6.2 Charge localization for non rod-like particles ........ 66
   6.3 Sedimentation velocity ............................... 70
   6.4 Effective surface charge .............................. 73
Contents

7 Sedimentation velocity of charged disks 79
  7.1 Introduction ........................................ 79
  7.2 Electrokinetic model ................................ 80
  7.3 Sedimentation of neutral disks ................... 81
  7.4 Sedimentation velocities of charged disks: effect of charge ... 83
  7.5 Sedimentation velocities of charged disks: volume fraction dependence 85
  7.6 Sedimentation velocity of charged disks: effect of the diffuse layer ... 86
  7.7 Sedimentation velocity of charged disks: shape effects. ........... 92

8 Electrophoretic mobility of charged-neutral model proteins 101
  8.1 Introduction ........................................ 101
  8.2 Model system ........................................ 102
  8.3 Electrophoretic mobility of a sphere with an electric dipole. .... 103
  8.4 Electrophoretic mobility of a quadrupole .................. 103
  8.5 Electrophoretic mobility of a colloid with zero quadrupole ....... 107

A Problems with a multi-component lattice-Boltzmann description of an electrolyte 113
  A.1 Lattice Boltzmann method for solving the electrokinetic equations .. 113
  A.2 Boundary nodes and origin of the spurious currents ............ 118
