Acknowledgements

This thesis is the result of four years of research conducted at the Faculty of Economics and Econometrics of the University of Amsterdam. Many people think of Ph.D. students struggling alone with their research. Unfortunately this is true to some extent. However, it would have been difficult to finish this project in time without the encouragements of others. The contact with these people has been pleasant and fruitful and I want to take this opportunity to thank them.

First of all, I want to thank my supervisor Jan Kiviet. When I started as a Ph.D. student I knew little about panel data and after reading a huge pile of books and articles about the subject I felt completely lost. However, Jan has done a great job in guiding me through my first steps as a scientific researcher. In my opinion trust is an important value for a Ph.D. student and Jan has given me this at crucial points in time.

I want to thank the other members of the committee for reading the manuscript. Thanks to Tom Wansbeek and Marno Verbeek for their helpful comments on an earlier thesis proposal. Thanks to Mars Cramer and Jan de Gooijer for their remarks about the final manuscript. Thanks to Peter Boswijk for thinking along with me many times and providing valuable comments related to the contents of this thesis.

Regarding the separate chapters in this thesis I have benefitted from the support of a number of people. I want to thank Abdel El Makhloufi for the pleasant discussions we have had. His enthusiasm especially about regional economics stimulated me to get to know more about this field of economics. Moreover, he shared with me his data, which have been used in Chapters 2 and 3. Furthermore, I want to thank De Nederlandsche Bank for providing me with the data used in Chapters 4 and 5. Thanks to Peter van Els and Carlo Winder, who stimulated me a lot when I was still an undergraduate student, and to Peter Vlaar for his comments on an earlier draft of Chapter 5.

I want to thank my colleagues at the University of Amsterdam, Tinbergen Institute and other institutions for either their professional or moral support (or both). In particular I want to thank Javier Alvarez, Dennis Botman, Cees Diks, Noud van Giersbergen, Angela van Heerwaarden, Tijs Huisman, Andries Jansen, Frank Kleibergen, Erik Leertouwer, Sebastiano Manzan, Sicco Marsman, Arnold van Meteren, Herman ten Napel, Hans van
Ophem, Pieter Jelle van der Sluis, Jaap Spreeuw, Jan Tuinstra, Michel van de Velden, Henk van de Velden, Roy van der Weide and Dawit Zerom.

I would have had a nervous breakdown already if writing this thesis had been the only thing in life. Hence, I thank the boys from JOS Zaterdag 3 for letting me kick out frustrations in the field. We are the champions! Thanks to the CREA Orkest and Philarmonie for the many musical orgasms. Thanks to Ingrid de Vries for being an excellent violin teacher and a good friend for many years.

My parents have always encouraged me to complete a university study. While my interest for econometrics grew only slowly, they nevertheless supported me to the very end and I am grateful for this. While I have become a surrogate midwife, Marieke’s knowledge of econometrics has exploded in the last few years. As she knows me so well for such a long time, she was able to advise me in many situations in which I did not know what to do. Thanks forever!
