Integration of design and control by nonlinear analysis
Bildea, C.S.

Citation for published version (APA):
Bildea, C. S. (2001). Integration of design and control by nonlinear analysis
## Contents

**Introduction**
- Main contributions 5
- Motivation 6
- Thesis overview 7
- Literature cited 18

1. Systemic Approach to Integrating Conceptual Design and Plantwide Control 23
   - Introduction 24
   - Basic idea of the systemic approach 26
   - Integrating conceptual design and plantwide control 28
   - Case study: HDA plant 33
   - Conclusions 49
   - Literature cited 49

2. Interaction between Design and Control of a Heat-Integrated Distillation System with Prefractionator 51
   - Introduction 52
   - Design of the prefractionator / side stream column configuration 54
   - Heat integration considerations 55
   - Design results 56
   - Controllability analysis 59
   - Closed loop dynamic simulation 72
   - Conclusions 75
   - Literature cited 76

   - Introduction 80
   - Mathematical model 82
   - Steady-state behaviour 86
   - Dynamic behaviour 91
   - Design procedure 93
   - Conclusions 97
   - Notation 98
   - Literature cited 101
   - Appendix: Bifurcation points computation 102

   - Introduction 106
   - Model equations 108
   - Bifurcation points 111
   - Steady-state behaviour 112
   - Dynamic behaviour 115
   - Design considerations 117
   - Conclusions 118
   - Notation 119
5. Interaction between Design and Control of Heat-Integrated PFR
   Introduction
   Design considerations and model equations
   Controllability analysis
   Nonlinear analysis
   Dynamic simulation
   Conclusions
   Notation
   Literature cited

6. Singularity Theory Approach to Ideal Binary Distillation
   Introduction
   State multiplicity in ideal, binary distillation
   Solution method
   Results
   Literature cited

   Introduction
   Plant Damkohler number
   Interaction between Design and Control
   The Plug-Flow Reactor
   Consecutive reactions
   Second-order reaction in CSTR
   Conclusions
   Literature cited
   Appendix

8. Conclusions and suggestions for further research
   Summary
   Samenvatting
   Acknowledgement
