Acknowledgements

During the years that I have worked on my thesis, I have had the opportunity to meet and discuss with many scholars in Europe and the rest of the world. I would like to thank Edmar Almeida, Lee Altenberg, Esben Andersen, Peter van den Besselaar, Stuart Blume, Henry Etzkowitz, John Grin, Linda Kamp, Steven Klepper, Cooper Langford, Alessandro Nuvolari, Lionel Nesta, Andreas Pyka, Shyama Ramani, Alban Richard, Stéphane Robin, Jerry Silverberg, and Paul Windrum for discussions, help, and advise.

Peter Nijsten in Amsterdam and Elena Francorsi in Grenoble have been of great help in the collection of data, for which I owe them many thanks. Michel Trommetter and Stéphane Lemarié in Grenoble have been very kind to provide me computational support and important feedback on empirical results. During visits to Trento and Aalborg, simulations have been developed in collaboration with Luigi Marengo and Marco Valente. At the final stage of the thesis, I benefited from comments by Paul David, which have improved a number of important arguments. I thank Stéphane Robin for assisting me in writing the French summary.

I would like to thank all my former colleagues at the Department of Science and Technology Dynamics at the University of Amsterdam and at the Unité Sociologie et Economie de la Recherche Développement, part of the French national institute for agronomic research (I.N.R.A.) and part of the University of Grenoble. Finally, I would like to thank my former colleagues at the Department of Innovation Studies at the University of Utrecht for providing me the time to finish the thesis.

Special thanks to my supervisors Loet Leydesdorff at the University of Amsterdam and Paolo Saviotti at the University of Grenoble who put faith in me from the very beginning, and who were always available for intellectual help, motivational support, and administrative obligations.

The grants of the European Commission (TMR-grant ERB4001GT961736) and the University of Grenoble (Europole-grant) are gratefully acknowledged.

Amsterdam, September 2001
