Many people have in one way or the other contributed to the PhD research in the four years which it took to complete the research and the writing of the dissertation. However, having completed the dissertation, I want to go back to the very beginning and I feel that some of the initial credit should go to John Roest, a director at my former employer Vlisco BV in the Netherlands. By giving me the opportunity to work for a period of two-and-a-half years in Ghana, with brief stints in Ivory Coast, he made it possible for me to gain the incredible experience of working in a developing country. At the same time, my time in Ghana and Ivory Coast, as well as my subsequent travels to Burkina Faso, Togo and Mali, allowed me to obtain first-hand experience of the difficulties which people in developing countries face daily. Numerous long train and bus rides, as well as some boat-trips, made me aware of the significant impact of distance and poor transportation facilities on the freedoms of people in rural areas to choose. The feeling of being in a forgotten corner of the world had already come over me in the metropolitan area of Accra and Tema, but the limited availability of information through newspapers, radio and television, as well as the absence of telephone services in some areas which I visited or passed through, often caused my world to shrink to the there and then. Eventually, the extreme bolts-and-nuts, hands-on work at Ghana Textile Printing Co. Ltd (GTP) in Tema made me look for a challenge at a more abstract and academic level. In all honesty, I can say that if not for my contract with GTP, I would not have embarked on this PhD research.

Initially, I received encouraging support from researchers at my alma mater, the University of Twente at Enschede, the Netherlands. In particular I would like to thank both Sip de Boer and Miriam Walbeek for allowing me access to their research material, as well as for providing me with very helpful suggestions. During one of my initial surfing-trips on the world wide web, I established virtual contact with people at organizations like the International Telecommunication Union (ITU), UNESCO, VITA and others. Of all those people I thank Johan Embreg of the ITU in Geneva for giving me the opportunity to participate in discussions and activities concerning small-scale communication centers in developing countries, and for helping me out in Vietnam when some local bureaucrats wanted written proof of my formal status as a researcher on behalf of international organizations before deciding to help me with my expert-interviews. I may in the end not have ended up being as supportive of the ITU’s version of small-scale communication centers as Johan Embreg may initially have expected, but I hope this dissertation will provide him and his colleagues with some useful insights and thoughts after all. I would also like to thank Loy van Crowder and Francois Fortier at FAO, for sharing valuable information with me and for their, and their colleagues’, feed-back on my research through a presentation at FAO’s headquarters in Rome. Similar thanks have to go to Stijn van der Krogt at the International Institute for Communication and Development (IICD) in Den Haag, the Netherlands.

However, most importantly I thank all the people in Ghana, Mali, Indonesia, Vietnam and Peru, who allowed me some of their time, shared valuable information with me in the interviews, provided me with documents, helped me to contact other experts on electronic media in rural development and opened up my eyes even more. This research would not have been possible without the cooperation of the above mentioned people, who helped to make my three successive field research periods in Indonesia, Vietnam and Peru a success. I also thank prof. dr. Cees Hamelink and Ellen Kole of the University of Amsterdam (UvA). Cees Hamelink, trusted that I would be capable of converting my initially very broad approach and somewhat disparate argumentation into a dissertation worthy of a PhD degree and with Ellen Kole I more or less shared the same fate as independent researcher, which provided us with experiences and talk to matter about at, unfortunately enough, rather irregular intervals. At more regular intervals Cees Hamelink scrutinized my writings, encouraged me to continue in the direction I had chosen and eventually improved the quality of the dissertation by challenging various aspects of my theoretical argumentation, and the form and content of the case studies, my analyses, comparisons and conclusions. Conducting a PhD research is very much an individual, and at times a rather lonely, effort and perhaps even more so when, as in my case, it is done as an independent researcher without immediate feedback from peers in a university setting. Therefore, I am most thankful to Cees Hamelink for regularly confirming to me that I was making steady progress in the direction of a
sound dissertation.

At the very last, but certainly not the very least, I would like to thank those who were closest to me in the four years of the PhD research. My parents, Jan and Nel van Koert, who initially may have been weary of yet another exploit by their oldest child, which deviated a bit from what most young people at the age of around thirty in Dutch society tend to do. However, they always gave me their full support and continued to express their faith in me and in my ability to make responsible decisions. My younger siblings, Jeroen and Astrid, who respectively supported me and set an example for me to achieve high goals. My brother-in-law Rogier, who went through the tiresome, and at times certainly tedious, job of reading and studying the entire dissertation in order to be a paramjf. A position he shared with my dearest soul mate, Sapna Sanagavarapu, who went through countless versions of the parts of an initially disparate argumentation and in the process helped me to improve on the argumentation, my English grammar, as well as on my English vocabulary.
