Acknowledgment

Without the help of others, this thesis would never exist. I'm grateful for the support from all the people mentioned directly and indirectly in the coming: Professor Martin Kersten - for encouragement and possibility to continue the exploration of SDDSs, and for many visionary discussions and brain-storming sessions; Professor Arno Siebes - being the best least bossiest boss I had, and for his always joyful comments; Professor Tore Risch - for my first introduction to research and in database systems implementations. Also for the enthusiastic support during my writing of my Licentiate Thesis, and for providing an exciting and open discussion atmosphere in the EDSLAB group; Arjan Pellenkofft - for being a great guy to share an office with, but not the least his stunningly ability to pinpoint “what-to-fix” with papers; Peter Boncz - for his friendliness and discussions about the Monet Database System; Florian Waas - for his good ability to stand my humor, but also for interesting discussions on problem solving; Wilko Quak - for give-and-take in the area of “strange” data structures; Witold Litwin - introduced me to the area of SDDSs through LH*, and the fruitful cooperation on the LH* LH-paper.

Finally, I would like to thank all my current colleges at CWI as well as former colleagues at EDSLAB for the working environment. Special thanks goes to Thomas Padrone McCarthy who thanked me in his thesis for thanking him in mine. By the way, he is great to discuss obscure implementations with too!

At PELAB (Linköping), I also wish to thank the former members Niclas Anderson and Lars Viklund for their help on the Parsytec machine; Henrik Nilsson for our extended discussions on computer “religious” matters in computer science.

At SVL, IBM I’d like to thank Jay Pederson for doing a final read-through and giving constructive feedback.

In an extended final thanks, I want to mention my family both in Norway and Sweden, I have not seen you as much as we would have liked to, but you have always been in my mind.

And I have to mention my Amsterdam friends, which are the best you could which for: Tobias “MovieBuff”, Frida, Scott & Rachel, Thian & Robert, Maja & Henrik Sydost-Berg, Pter & Cecilia, Martita for a inter-
est ing first time in Amsterdam, and last but certainly not the least Kee Jon Kim.

Thanks,

Jonas S Karlsson
Amsterdam, January 2000
