Contents

1 General introduction .......................... 1
  1.1 Introduction .................................. 1
  1.2 Background .................................. 1
    1.2.1 An ecological definition of cannibalism .... 2
    1.2.2 Cannibalism as a special case of predation .... 2
  1.3 Population dynamic theory of cannibalism - an overview of literature 3
    1.3.1 Population control .......................... 5
    1.3.2 The destabilising effect of cannibalism ....... 5
    1.3.3 The stabilising effect of cannibalism ......... 7
    1.3.4 Bistability and the life boat effect .......... 8
    1.3.5 Effects on population size distribution ....... 9
  1.4 Size-dependent cannibalism: empirical evidence .................. 10
  1.5 Outline of this thesis ......................... 11

2 Dwarfs and giants: cannibalism and competition in size-structured populations 15
  2.1 Introduction .................................. 16
  2.2 The model .................................... 17
    2.2.1 The individual level model ................. 19
    2.2.2 Interactions: planktivory and cannibalism .... 22
  2.3 Results ...................................... 25
    2.3.1 The base line case: no cannibalism .......... 25
    2.3.2 Increasing the cannibalistic voracity ....... 27
    2.3.3 Parameter sensitivity ........................ 35
  2.4 Discussion ................................... 35
    2.4.1 Acknowledgments ............................. 41
  Appendix 2.A Assimilation and energy allocation ............. 41
  Appendix 2.B The digestion time ........................ 42

3 The impact of size-dependent predation on population dynamics and individual life history 43
  3.1 Introduction .................................. 44
  3.2 Model and methods ............................. 46
5.5.7 After branching: dimorphism of switch sizes 123
5.6 Discussion .................................................. 126
  5.6.1 Mechanisms of evolutionary branching 126
  5.6.2 Assumptions revisited ................................. 128
  5.6.3 The scope for empirical testing ....................... 130
Appendix 5.A Some models without size-structure .......... 132
  5.A.1 The unstructured analogue ............................. 132
  5.A.2 Time splitting, phenotypic plasticity or learning .... 133
Appendix 5.B Juvenile delay and evolutionary cycling ....... 137
  5.B.1 Results ................................................. 137
  5.B.2 Definition of a life history map for continuation .... 139

6 General discussion ......................................... 143
  6.1 Introduction ............................................ 143
  6.2 Questions revisited ..................................... 143
  6.3 Bioenergetics versus interactions ...................... 145
    6.3.1 Different bioenergetics ........................... 145
    6.3.2 Similar interactions ............................... 147
    6.3.3 Similar results? .................................. 148
  6.4 Testable hypotheses - the link with empirical data .... 156
  6.5 This thesis in perspective ............................. 158

7 Summary .................................................. 161

8 Nederlandse samenvatting ................................. 167
