Acknowledgments

I wish to express my sincere gratitude to all who contribute to this work.

Prof. Dr. C.L. Davidson, who supported me in several ways. As scientist, he gave me support, guidance, criticism. As promotor, he pushed me in some moments in which the wind had dropped. Moreover, and I am particularly grateful to him for this aspect, he taught me a lot of “other” things especially in the difficult field of balancing work and other aspects of life.

Prof. Dr. M. Ferrari, with who I spent plenty of time in discussing many and many aspects of this subject. Without his precious skill in transferring ideas in science, this thesis would never be done. I want to thank him also for the possibility he gave me to come in touch with the research world and for the strength and the energy that he always uses pushing himself, me and the other people of his research group in achieving the goals.

Prof. Dr. E. Bertelli, who first gave me the possibility to take part of the University world and that allowed me, under his guide, to train in teaching and researching.

To the memory of Dr. Riccardo Garberoglio, to who I’m grateful for teaching me the first approaches to honest-minded research.

Prof. Dr. A. J. Feilzer, Prof. Dr. B. van Meerbeek, Prof. Dr. M. A. J. van Waas, Dr. A.J. de Gee of the promotion committee for their agreement in participating on my thesis committee and for their critical review of the manuscript.

To my family at large who supported me in several ways during this busy period. A special thank to my father and my mother, whose life-experience and suggestions are always precious for me; a kiss to my wife Daniela, who bear myself and that always act in my life as a stress-relief and finally a big hug to my two small children Lorenzo and Francesco. I apologize to them for the time I stole to their company during this period.
