List of tables

3.1 Ethnic group, type of village and sources of water on the mountain 50
3.2 Types and description of information collected at the household level 56
3.3 Meteorological seasons, Gregorian lunar months and time reckoning in the traditional system 61

4.1 Mean annual rainfall (mm) for selected sites in the district, by ecological zones 83
4.2 Location, altitude and annual rainfall variability of selected stations in northern Kenya 87
4.3 Location and altitude of some selected stations in northern Kenya region 90
4.4 Top ten wettest or bottom ten driest years for Marsabit and Moyale, 1922-2001 91
4.5 Human populations in the district by divisions and locations, 1962-1999 109
4.6 Population of the district by the main ethnic groups (%), 1948-1989 114
4.7 Distribution of the main groups living inside and outside ‘home’ districts 123

5.1 Rough estimates of the population trend of ‘natives’ and ‘non-natives’ in Marsabit District and Marsabit Township 133
5.2 Crop output Marsabit Mountain from 1953-1960 136
5.3 Township population in the 1950s 137
5.4 Population trend of ‘Natives’ from 1957-1960s for Marsabit District 138
5.5 Population trends in Marsabit District and Mountain 139
5.6 Overview of settlement schemes on Marsabit Mountain 141
5.7 Summary of village descriptions 145
5.8 Place of birth of male head of household (n = 287) and region of origin of parents and grandparents (n = 284) 153
5.9 Year of arrival per region of origin (n = 230, excluding those born on the mountain) 154
5.10 Region of origin of respondents per ethnic group (n = 286) 154
5.11 Region of origin of respondents per site (n = 286) 155
5.12 Ethnic identity of male head or deceased husband in the sample villages (n = 285) 155
5.13 Ethnicity of wives and female heads: (n = 286) 155
5.14 Time period of arrival and place of settlement (n = 286) 156
5.15 Time of arrival on the mountain and causes of animal loss before settlement among first generation settlers (combinations possible) (n = 135) 157
5.16 Other reasons for the settling of respondents, apart from animal loss (combinations possible) (n = 108) 158
5.17 First generation settlers and number of TLU at the time of settlement 158
5.18 Time of arrival of the parents, and their reasons to settle (n = 52) 159
5.19 Reasons of parents of second generation of settlers (n = 23) 161
5.20 Type of housing per site 162
5.21 Major source of income used for the house in 1998 per site: (n = 282) 163
5.22 Type of house and mean number of livestock 165
5.23 The mean number of years that first generation of migrants have lived on the mountain according to house type 166
5.24 Presence of own toilet (n = 286) 166
5.25 Wealth indicators of settlement scheme and non-scheme households 173
5.26 Average values of wealth indicators for scheme and non-scheme households 174
5.27 Food self-sufficiency or cash earnings above the absolute poverty line 176
5.28 Perception of the changed circumstances after household settlement 179
5.29 Responses to the question relating to a possible return to a purely pastoral lifestyle 181
5.30 Reasons for not wanting to return to a (mobile or purely) pastoral way of life 183

6.1 How land in Marsabit is acquired by the first and second generation of settlers 196
6.2 Procedure of land acquisition per research site (n = 287) 196
6.3 Time of marriage and time of arrival on Marsabit Mountain 197
6.4 Difference between year of arrival and year of land acquisition (of first generation of settlers) 197
6.5 Difference between year of marriage and year of land acquisition 198
6.6 First generation of settlers and the mean number of years people waited before they obtained land after arrival according to the land acquisition procedure 199
6.7 Number of TLU and married status of household at the time of arrival (first generation of migrants who came as adults) 200
6.8 Procedure of land acquisition for first generation of migrants who came without parents 201
6.9 Difference between cultivation and acquisition of land 201
6.10 Sex of household heads of first generation of migrants (who came as adults) 202
6.11 Sex of household head and procedure of land acquisition (only first generation of households, who came as adults) 203
6.12 First generation migrants in the spontaneous settlements and sort of help obtained during the first planting season 203
6.13 Relationship with those who helped in the first planting season 204
6.14 Sex of head of household and help from organisations received in scheme and non-scheme households 205
6.15 Procedure how the first piece of land is acquired: the influence of ethnicity 206
6.16 Organisation that provided help at household level per language group 207
6.17 Procedure by which the first piece of land was acquired and the class land ownership totals 208
6.18 Size of the sample field and procedure of acquisition 208
6.19 Land prices (in Ksh.) of 42 sample fields in wet zone villages (Dirib, Badassa, Sagante, Kituruni, Daka-baricha) 209
6.20 Land prices (in Ksh.) of 12 sample fields in the dry zone villages (Manyatta Jillo, Hula Hula, Karare) 209
6.21 Farm size and language area 210

7.1 Sample sizes and responses to whether or not a household owns any livestock 217
7.2 Sample size and sex-specific responses to whether or not a household owns any livestock 219
7.3 Household affirmation of ownership of specific livestock types on the mountain 220
7.4 Household affirmation (% n) of ownership of specific animal types at lowland sites 221
7.5 Household ownership of only a single livestock type on the mountain and in the lowlands 222
7.6 Households that own a combination of herds (% n), on the mountain 224
7.7 Households that own a combination of main herds in the lowlands 225
7.8 Household livestock ownership on the male-female heads of the household, per site 226
7.9 Household livestock ownership on the wealth ranks, per sample sites 228
7.10 Aggregate and mean animal holdings on the mountain, by animal type 230
7.11 Villages transition table based on average herd size 230
7.12 Aggregate and mean animal holdings in the lowland 232
7.13 Aggregate, mean herd size and herd size variation based on the sex of the head of the household 234
7.14 Aggregate, mean herd size and herd size variation based on the sex of the head of the household in Daka-baricha and Manyatta Jillo in 1998 234
7.15 Aggregate and mean herd holdings of main ethnic groups on the mountain 238
7.16 Chicken owned and proportions of households that own chicken on the mountain and lowland 239
7.17 Household size, total TLU and per capita measures on the mountain 241
7.18 Household size, absolute and per capita TLU measures in the lowlands 244
7.19 Household size, absolute and per capita TLU of male and female head of households 245
7.20 Household size, total TLU size and per capita of male and female-headed households in the lowlands 248
7.21 Total and mean human population, TLU size and per capita measures for ethnic groups 250
7.22 Sample size, average livestock holding at the time of settlement (in 1998) and years of farming on the mountain 254
7.23 Sample size and mean TLU size on the mountain in year of settlement and in 1998 (t = 2) 255
7.24 TLU wealth class and average herd size on the mountain when settled (t = 1) and in 1998 (t = 2) 256
7.25 Household transition matrix of TLU wealth rank, per settlement on the mountain 257
Staff resources of KWS, Marsabit National Park/Reserve 365
Population, area, number of households and density of sites on the mountain 369

9.11 Animals slaughtered and off-takes based on slaughter figures in selected years 395
9.12 Sample duration, pooled average prices, animals sold and unsold/month 402
9.3 Average household size, milk-producing animals and sale of milk on the mountain per wealth class 415
9.4 Average household size, milk animals and milk sale in the lowlands, per wealth class 420
9.5 Comparison of livestock exports and slaughter off-takes for selected years in Kenya 431

10.1 Typology of main types of livestock ownership rights among pastoral groups 452
10.2 Herd ownership rights (%) of households on the mountain 458
10.3 Herd ownership rights (%) of households in the lowlands 460
10.4 Herd ownership rights (%) of households in the lowlands 466
10.5 Shannon-Weiner index of herd tenure diversity (x 10^-1) of wealth ranks, per study area 468
10.6 Mean monthly cash income (Ksh.) and correlation coefficients per TLU wealth class 472
10.7 Pooled total livestock sales on the mountain, per TLU wealth class 477
10.8 Pooled total livestock sales in the lowlands, per TLU wealth class 478
10.9 Recent livestock exchanges on the mountain, per TLU wealth class 480
10.10 Livestock exchange in the lowlands, per wealth class 482
10.11 Lowland households’ motives for engaging in the animal trust system 485
10.12 Perceived changes in household herd-sharing practices in the lowlands 487
10.13 Recent average livestock losses per sample site and wealth rank 488
10.14 Social relationship of livestock exchanges on the mountain, per wealth class (TLU/hh) 492
10.15 Social relationships in livestock exchange in the lowlands, per wealth class 493

11.1 Number of households and area (km^2) per location in the Marsabit Mountain area (Central Division and Gadamoji Division) 507
11.2 Crops planted on Marsabit Mountain in October 2001 507
11.3 Yearly results of an anthropometrical survey for children under 5 years of age (1999, 2000 and 2001) 513
11.4 Area (ha) being used for fruit trees in hectares and harvests in metric tonnes (mt) in the Marsabit Mountain area (Moyale figures not included) 519
11.5 Overview of irrigation activities 520
11.6 Space occupied by fields in the sample area in acres 524
11.7 Tree density per acre per site 526
11.8 Type of fences observed in the area 527
11.9 Type of fence on the sample fields 527
11.10 Steepness of fields and area of the sampling farms in acres 528
12.12 Land coverage for the seasonal analysis of maize and beans grown on the sample fields 530
12.13 Total field size, crop cover and percentage of land planted with maize and beans on the sample fields 530
12.14 Total production and land productivity of maize and beans per ecological zone in sample fields 532
12.15 Total food production (in 100 kg bags) per acre on sample fields 532
12.16 Mixed cropping (harvest in 100 kg bags) 534
12.17 Maize in monoculture (production per field per season in 100 kg bags) 534
12.18 Overview of maize production for six growing seasons in 90 kg bags and in kg/ha 535
12.19 Overview of harvest in kg per hectare on sample fields 536
12.20 Productivity of the sample field and presence of a house 537
12.21 Correlation between harvest of maize and beans per acre and tree density and field size on fields with house per ecological zone 537
12.22 Mean harvest of maize plus beans in 100 kg bags per class of land in ownership 538
12.23 Productivity of land available and percentage of total land planted per size class of land in ownership 539
12.24 Productivity of sample fields planted with maize in monoculture or maize 100% intercropped with beans, June 1997 and February 1998 per class of landownership and ecological zone 540
12.25 Scores on harvest per year 542
12.26 Scores of households on food production over three years per ecological zone 543
12.27 Mean grain harvest per year from 1997-2000 per ecological zone 544
12.28 Characteristics of households per food production level in the wet zone 544
12.29 Characteristics of households per food security situation in the dry zone 545
12.30 Occupation of men at the time of marriage of first generation migrants 547
12.31 Occupation of women at the time of marriage of first generation of migrants 547
12.32 Reason for coming to the mountain, first generation 547
12.33 Farms producing mirraa in the wet zone according to classes of grain production 548

13.1 Household affirmative responses (%) to the use of vegetation products, per village 557
13.2 Source of woody vegetation used by households, per sample village 559
13.3 Household possession of a permit license, per sample site 561
13.4 Sex of persons collecting products per sample site 563
13.5 Means of transport used to obtain products, per sample site 563
13.6 Transaction matrix for natural products, per sample site (n = 49 in 1998 and 40 in 2000) 565
