The most significant contribution to my research was made by the 215 participants, who were willing to spend many hours being interviewed and performing all kinds of experimental tasks. It was enriching to share in their attachment biographies, and they opened my heart to clinical work. For that, and for their participation, I thank them sincerely.

Corine de Ruiter acknowledged the importance of investigating attachment-related information processing and devised the initial plan for this research project. Due to her job transfer, we had little opportunity to discuss the development of my work. However, I highly value the contributions she made to Chapter 2 and Chapter 3.

For a short period Floor Kraaimaat took over coaching me, until he too made a job transfer. I appreciate his continuing expressions of interest in my studies.

Walter Everaerd became my official supervisor from 1995 on. I value the freedom he allowed me to be as self-willed and as individualistic as I can be. During the final stage of writing my thesis, his scholarly remarks about the results and interpretations were very helpful.

In 1995 Rien van IJzendoorn generously agreed to be my external supervisor. His knowledge of attachment theory and research has never ceased to impress me. He has been enthusiastic and supportive over the years and has thereby stimulated me to continue my work. Furthermore, he showed incredible patience with my slow progress in writing and yet was always fast with annotations to the many versions of my different papers.

I am very grateful to Carlo Schuengel for the many Adult Attachment Interviews he double-coded, for his assistance in writing Chapter 4 and for his good-humored and supportive pep talks. Miranda Olff, another person who was very patient with my slow writing, was of great assistance in teaching me the ins and outs of the Defense Mechanism Test, in double-coding DMT protocols and in writing Chapter 5. I thank Jos Brosschot for allowing me to use his memory tests for the study in Chapter 3 and for his contributions to Chapter 2.

Of the students who participated in parts of my research, I especially want to name Barbara Schaefer, Elise Griede, Karen Grünning, Mariëtte Raven en Stephan Geerts. It was a pleasure to work together and they all sharpened my thinking.

Thanks are due to Arend Veeninga and to Joost Beek for recruiting the patients who participated in the clinical studies. I am grateful to Mark Baldwin for providing me with the software of his lexical decision task and to Alex Rubino for allowing me to use his DMT separation slide.

Technical programs for the computerized tasks were ingeniously developed and many times revised by Bert Molenkamp and Roland Koopman. I could always rely on the faculty’s Helpdesk; I especially want to name Marc Lansman, who skillfully rescued a whole chapter after I had deleted a weekend’s work.

I thank Joe Sergeant for lending me his laptop so I could finish most of the texts at home. I am very grateful to Maud Peereboom for the time she spent reading some of the chapters and improving my English.

Several co-workers from the Department of Clinical Psychology, and especially the secretaries, provided necessary and much valued breaks for conversation, coffee and fun.
During my last year at the Department, I shared a room with Catharina Hartman and Janneke van der Velde. Our supportive companionship in finishing three theses and our “pizza-visie” has made that time much more enjoyable than I had thought possible.

My “paranimfen”, Katinka van Dijken and Suzanne Vis, can be held partly responsible for my staying at the job in the first four years. They both provided me with innumerable coffee- and lunch breaks, encouraging e-mails and enjoyable distractions. Planning and preparing The Day with them was a pleasure.

I am blessed with a long line of “Friends & Relations” who helped me pull through in tight times. I am grateful for their continuous interest and support, both in my personal life and in my work, and I look forward to being able to share more time with them from now on. I especially want to name Annemarie, Annemarie, Ans, Ardine, Charlotte, Eloë, Franka, Katinka, Mara, Philo, Ruud, Suzanne, Tatiana and Vita; I cherish being part of your lives.

I thank Andreas for teaching me early on that the brain is located way above the waist. I am grateful to Cordula and Emanuel for supporting me throughout my somewhat erratic career. Ans and Sicco took me into their hearts from the first moment we met. They have shown a continuing interest in my well being and my activities and were always there with both moral and material support. I sincerely regret Sicco not being part of this event, which he would have enjoyed so much.

Most of all I want to thank Marijke. You were there in good and bad times and never stopped believing in me and in the strength of our love. Sharing our lives for the past 17 years is the best that has happened to me. You were endlessly patient and supportive in these last busy years, and I promise to make up to you for the many evenings, nights and weekends I spent on this thesis. I hope we will continue enjoying each other’s company “t.d.l.”.

I dedicate this work to my grandparents Rosa-Louise and Salomon (ziehronam livracha), beloved childhood attachment figures.
