### 1 Introduction

1.1 Developments in regional demography and regional studies  
1.2 The development of family demography  
1.2.1 The family rather than the individual as the more frequent and rational decision-making unit  
1.2.2 Advances in theory and methodology of family demography  
1.3 The importance of regional and family demography studies in China  
1.3.1 The family is one of the most important constituent parts in Chinese society  
1.3.2 Regional disparities are tremendous  
1.3.3 Research objectives  
1.4 Rationale for the site selection  
1.5 Methodology and data  
1.5.1 Region as a system  
1.5.2 A systems approach  
1.5.3 Projection models and other methods used  
1.5.4 Data  
1.6 Outline of the study

### 2 Socio-economic Context of Shenzhen and Taihe

2.1 Shenzhen City in the Pearl River Delta as representative of the regions in rapid economic development  
2.2 Taihe County in Jitai Basin as representative of the underdeveloped regions  
2.3 Comparison of socio-economic development level between Shenzhen and Taihe  
2.4 Discussion and conclusion

### 3 A Historical Overview of Population Change

3.1 Taihe County  
3.1.1 Population since the twelfth century  
3.1.2 Natural population growth from 1949 to 1980  
3.1.2.1 Before 1970  
3.1.2.2 The 1970s – the initiation of family planning policy  
3.1.3 Natural population growth since 1980  
3.1.3.1 The effects of a stringent birth control policy  
3.1.3.2 Approaching the actual fertility level  
3.1.3.3 Adaptation to the alterations in family planning policy  
3.1.3.4 Discrepancies in fertility between rural and urban areas  
3.1.3.5 Mortality  
3.1.4 Migratory population change

## Contents

6 Projection of Households and Population 151

6.1 Relevant issues 151
  6.1.1 Uncertainty, usefulness of knowledge 151
  6.1.2 Assumptions about the future 153
  6.1.3 Improvements of the traditional variants approach 153
    6.1.3.1 The probabilistic approach 154
    6.1.3.2 The scenario approach 155
  6.1.4 Household projection 155

6.2 The ProFamy model 157

6.3 Data preparation 160
  6.3.1 Base population and status identification 160
  6.3.2 Standard schedules 161
  6.3.3 Summary measures – scenarios 168
  6.3.4 A brief overview of the results 188
    6.3.4.1 Shenzhen SEZ 188
    6.3.4.2 Taihe 192

6.4 Discussion and conclusion 197

7 Population and Household Dynamics and Sustainable Development 201

7.1 Introduction 201
  7.1.1 Sustainable development 201
    7.1.1.1 Human carrying capacity 202
    7.1.1.2 Impacts of population on environment 202
  7.1.2 A model relating population, environment and development at regional level 203
  7.1.3 Relating environment and carrying capacity to issues in China 205

7.2 Population and household change and land use 209
  7.2.1 Decrease of cultivated land and food supply in China 209
  7.2.2 Land use and land cover in Shenzhen 212
    7.2.2.1 Decrease of cultivated land 212
    7.2.2.2 Grain production and land intensification 214
    7.2.2.3 Changes in land cover 217
  7.2.3 The challenge for meeting the increase in grain consumption 217
    7.2.3.1 Changes in cultivated land 224
    7.2.3.2 Grain production and consumption 230
    7.2.3.3 Expansion of residential land use and land for burial grounds 234

7.3 Environmental protection 238
  7.3.1 Grave challenge facing China's environmental protection 238
  7.3.2 Environmental problems in Shenzhen and Taihe 242
    7.3.2.1 The past and the present 242
    7.3.2.2 Simulations into the future 253

7.4 Discussion and conclusion 261
