ACKNOWLEDGMENTS

I would like to thank all the participating schools and teachers who have contributed to the realization of this dissertation. Without having the intention to wrong someone, I would like to mention some persons in particular who were of great help to me in times of sheer endless work, especially two staff members of the Open University, Dr. Tomic and Dr. Brouwers, and Professor dr. Hoogstraten of the University of Amsterdam.

Dr. Tomic, Welko, you were the person who adroitly motivated me to start upon this work. As a man of talents you could arouse my curiosity and thus made me examine theories and social phenomena. I would like to call you my mentor in respect of counseling and supervising my academic work. I would also like to call you a dear friend who stood by me whenever I needed support. I thank you for spending so much of your spare time on me. Without you and your altruism I would never have even thought of venturing upon writing a dissertation.

Dr. Andre Brouwers deserves my gratitude for his unremitting support in the field of statistics and his critical remarks on the various versions of my theoretical and empirical studies. Thank you also for your support in respect of scientific literature, and your enthusiasm in thinking along with me when problems seemed to be insoluble.

Professor Hoogstraten, I still remember our first meeting. Hardly ever did I encounter someone who made me feel at ease with only a few simple sentences of welcome. You made me experience an epiphany of confidence by so appreciatively discussing my work that I actually started writing my dissertation. I thank you dearly for giving me the actual opportunity to reach my goal.

Humans are social beings living together in a family and community that help them grow into the persons they are. Although they are deceased, I like to thank my parents for they put me on the track of study, which I have always followed since those first insecure steps. I also wish to thank my wife Dory and all those beloved in my environment who supported me in the handling of data, for their interest in my work, for their understanding of my absence when I was invited, and for living together with me in the process of realizing this work.

Will J. G. Evers
