ACKNOWLEDGEMENTS

This thesis has been very much a team effort, and I could not have accomplished it without the talents and dedication of each member of that team. First and foremost, my sincere thanks goes to Corine de Ruiter, Professor of Forensic psychology at the University of Amsterdam. Your generosity, the expertise you shared with me, the autonomy you granted me, and the confidence you showed in me throughout the years, have all been very much appreciated. You genuinely recognize the distinction between complacency and being content, and served as a role model because of your sincere commitment to excellence. Dear Corine, thank you for your unconditional support, understanding, and companionship, having touched my life in a special way and having made me a better person for knowing you.

I thank Paul Emmelkamp, Professor of Clinical psychology at the University of Amsterdam, for agreeing to serve as my second supervisor at a late stage in the process. His suggestions have improved the overall quality of the dissertation. I also would like to extend my appreciation to the committee members Wim Trijsburg, Theo Doreleijers, Robert D. Hare, Ellie Lissenberg, Hjalmar van Marle, Harald Merckelbach, and Aart Schene for reviewing the manuscript. Special recognition needs to go to Dr. Robert D. Hare. His invaluable work provided the inspiration for the subject of this dissertation.

My profound gratitude and admiration goes equally to Cécile Vandeputte and Pascalle van der Wolf who have worked with me directly on this research. Dear Cecile, your urban intellect, intriguing observations, and sparkling authenticity have sustained me through easy and tough times. Dear Pascalle, I truly hope that you recognize the important role that your continuing encouraging has played in helping me to achieve my goals. Also, I particularly wish to express my sincere appreciation and gratitude to Vivienne de Vogel for her invaluable help. My grateful thanks also goes to Henk Nijman for his fine collaboration in one of the studies reported here.

While some colleagues have frustrated me in my work, many others have been extremely helpful and invaluable in providing assistance with aspects of the studies reported in this thesis. I particularly wish to acknowledge the contributions of Ellen van den Broek, Ine Kusters, Henriëtte van de Maeden, Marleen Nagtegaal, Lieveken Vester,
Karlijn Vercauteren, Anke Weenink, Baukje van Zaane, Daan van Beek, Martijn Nieuwenhuizen, Pascal Wolters, and Stefan Zwartjes.

This research was carried out in the Dr. Henri van der Hoeven Kliniek in Utrecht, the Netherlands, whose Board of Directors continued to sponsor the study. I want to acknowledge the role of all the patients who participated in the reported studies. I appreciate their willingness to share their personal information; without their efforts, this research could not have been conducted. In addition, the informal discussions with some of them about their experiences in treatment was enlightening.

Next, I want to say thank you to all my new colleagues of the Expertise center for Forensic Psychiatry (EFP) for your confidence and the warm welcome in the past few months.

Thanks are due to my friends, Frieda, Anita, Tanja, Edwin, and Philip, all of whom provided alternative perspectives in times of need. Thank you Leo ("big brother") for lending me The Da Vinci Code. Finally, I wish to thank those closest to me who have never wavered in their love and support for me. In particular, my mother, Nel, my two closest friends, Arris and Steven, and Corine.

Life is about dreams, and hope, and courage. The courage to go on, even after those we love have left us. This is not easy. When one is brought low enough repeatedly or for an extended period of time, it becomes increasingly more difficult to imagine oneself happy again or able to push through life with the strength and confidence with which the 'reasonable healthy' go about their daily living. At this point one can teeter on the brink of despair, give up, consider taking one's own life and slide down to the very bottom from which one thinks never to recover. I am deeply grateful to Kees Cornelissen and Jan Scheffer, for invaluable support, enduring patience, thoughtful observations — for helping me to get a life I never would have had otherwise.
