ACADEMISCH PROEFSCHRIFT

ter verkrijging van

de graad van doctor aan de

Universiteit van Amsterdam op gezag van de Rector Magnificus

prof. dr. ir. K.I.J. Maex

ten overstaan van een door het College voor Promoties ingestelde commissie,
in het openbaar te verdedigen in de Agnietenkapel

op dinsdag 10 september 2019, te 10:00 uur

door

Vittorio Albergamo

geboren te Napels
Promotiecommissie:

Promotor(es): prof. dr. W.P. de Voogt – Universiteit van Amsterdam
prof. dr. ir. W.G.J. van der Meer – Universiteit Twente

Copromotor(es): prof. dr. ir. E. R. Cornelissen – Universiteit Gent

Overige leden: prof. dr. ir. H.J. Bouwmeester – Universiteit van Amsterdam
prof. dr. A.P. van Wezel – Universiteit van Amsterdam
prof. dr. ir. A. R. D. Verliefde – Universiteit Gent
dr. T.L. ter Laak – Universiteit van Amsterdam
dr. W. T. Kok – Universiteit van Amsterdam

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

PhD thesis, Institute for Biodiversity and Ecosystem Dynamics, University of Amsterdam, The Netherlands

ISBN: 978-94-91407-73-4

Cover design by Mabel Zeruche Garza and Vittorio Albergamo

Layout by Vittorio Albergamo

Print by Psiche e Aurora editore, San Donato Val di Comino, Italy

This work was conducted at the Institute for Biodiversity and Ecosystem Dynamics, University of Amsterdam, at KWR Watercycle Research Institute in Nieuwegein and at Eawag in Dübendorf, Switzerland. Funding was provided by the drinking water company Oasen (Gouda, The Netherlands) through the Efficiency of Small Contaminant Removal by Reverse Osmosis project. Additional funds were obtained from the European Union FP7 project SOLUTIONS (grant number 603437) and from the Luxembourg National Research Fund (FNR) (grant number 12341006) through international collaborations.
To my parents, Rosa and Lucio, and my brother, Francesco.
Table of contents

Chapter 1. General introduction ................................................................. 9

Chapter 2. Target analysis of polar organic micropollutants in natural drinking water sources by liquid chromatography coupled to high-resolution mass spectrometry .......................................................... 19

APPENDIX A. Supplementary information to Chapter 2 .................... 40

Chapter 3. Removal of polar organic micropolllutants by pilot-scale reverse osmosis drinking water treatment ......................................................... 55

APPENDIX B. Supplementary information to Chapter 3 ................. 79

Chapter 4. Removal of polar organic micropollutants by mixed-matrix reverse osmosis membranes ......................................................... 89

APPENDIX C. Supplementary information to Chapter 4 .............. 114

Chapter 5. Non-target screening of a riverbank filtration site ........... 119

APPENDIX D. Supplementary information to Chapter 5 ............... 143

Chapter 6. Combining bioanalysis and non-target screening to evaluate RO drinking water treatment .......................................................... 165

APPENDIX E. Supplementary information to Chapter 6 ............... 187

Chapter 7. Synthesis ........................................................................ 213

Summary ............................................................................................... 223

Samenvatting ........................................................................................ 227

References ............................................................................................. 231

List of manuscripts ............................................................................. 261

List of co-authors contributions ................................................................. 263

Acknowledgments ................................................................................ 265
