You will be contacted as soon as possible.

Acknowledgements

Fourteen years ago Gerard van der Geer offered me a PhD-position, of which this thesis is the result. I thank Gerard for creating this research opportunity, for his confidence, his encouragement and for his patience. At that time my second promotor Carel Faber was a post-doc in Amsterdam working on moduli spaces of curves. Now he is a professor in algebraic geometry at KTH in Stockholm and Johns Hopkins in Baltimore. My thanks go out to Carel for his commitment, enthusiasm and many helpful discussions. Moreover, I thank Carel Faber for his constructive cooperation during fall 2004.

My thanks to Bert van Geemen for his hospitality and his interest during my stay in Turin.

In Delft I had the pleasure to work with Jan Aarts on his ALAPAK-project, for which I am grateful. I thank Hendrik Lenstra and Bart de Smit for the confidence they showed in me and my research during the years in which I worked in Leiden. I thank my current colleagues at the Freudenthal Institute for creating a vibrant working atmosphere.

I studied mathematics and carried out my PhD research at the KdV Institute for Mathematics in Amsterdam. I would like to thank my former teachers for the mathematics I learned from them. In particular I would like to thank Peter Stevenhagen for his inspiring and stimulating lectures on number theory. My thanks go to my KdV-colleagues for creating a positive working environment. In particular I thank Martijn Dekker for his pleasant company in the years we shared a room.

Finally, I would like to thank the Netherlands Organization for Scientific Research NWO for the opportunity to carry out this research.
