Contents

INTRODUCTION 9

1 Algebraic curves and their moduli ........................................ 9
2 Complete subvarieties ...................................................... 11
3 Results .............................................................................. 12
4 Speculations ....................................................................... 13

CHAPTER 1 Overview of known results 15

1.1 Complete subvarieties: a survey ....................................... 15
1.1.1 Constructions of complete curves in $M_g$ ....................... 15
1.1.2 Bounds on the dimension of complete subvarieties .......... 18
1.1.3 Examples of higher-dimensional complete subvarieties ...... 19
1.2 Some calculations ............................................................ 21
1.2.1 Kodaira's construction revisited .................................. 21
1.2.2 The construction of González-Diez and Harvey revisited .. 23

CHAPTER 2 Explicit complete subvarieties of dimension $d$ in $M_{2d+1}$ 29

2.1 The basic step .................................................................. 29
2.2 A refinement .................................................................... 32
2.3 Minimality of the construction ........................................ 32

CHAPTER 3 Explicit complete curves in the moduli space of curves of genus three 35

3.1 The construction .............................................................. 36
3.2 The corresponding family of curves .................................. 37
3.3 Pryms of ramified double coverings of genus 3 curves .......... 39
3.4 The degree of $\lambda$ and the number of hyperelliptic fibers .......... 41
3.5 The surjectivity of the Prym map ..................................... 44

CHAPTER 4 A complete surface in $M_6$ in characteristic $> 2$ 47

4.1 The construction .............................................................. 47
4.2 Blowing down the diagonal ............................................... 48
4.3 Characteristic 0 ............................................................... 50

CHAPTER 5 Families of curves without sections 51

5.1 Basic construction ........................................................... 51
5.2 A family of smooth curves without sections ..................... 53
CHAPTER 6 Some results on complete surfaces 55
6.1 Complete surfaces in \( M_g \) and the classification of surfaces ............ 55
6.2 Surfaces in the locus of curves with nontrivial automorphisms ......... 57

CHAPTER 7 Speculations 61
7.1 The genus of the base curve ............................................. 61
7.2 Can \( M_4 \) contain a complete surface? .......................... 63
7.2.1 A computation in the Chow ring of \( M_4 \) ....................... 63
7.2.2 The Prym construction for \( M_4 \) ................................. 64
7.2.3 Diaz's filtration of \( M_4 \) ............................................ 65
