CONTENTS

CHAPTER I: REVIEW OF CLINICAL AND EXPERIMENTAL MEMORY TESTING AND THEIR APPLICATION TO THE STUDY OF AGEING AND DEMENTIA

I Clinical and experimental memory testing
1. Clinically administered memory tests in neuropsychological assessment
2. Memory models and experimentally administered memory tasks in neuropsychological research
3. Conclusion

II Ageing and dementia
1. DSM-IV
2. Literature review of memory functioning in normal ageing and AD
   2.1. Episodic memory
   2.2. Semantic memory
   2.3. Short-term (or working) memory
   2.4. Implicit memory: priming effects
   2.5. Implicit memory: procedural memory or skill learning
3. Focus on very early and preclinical AD
4. Conclusion

III Research purpose and questions
1. Aim of present research
2. Research questions

Appendix: Examples and description of clinical memory tests

CHAPTER II: METHOD

I The first administration of the memory test battery
1. Sample
2. General procedure
3. Material
   3.1. Memory test battery
      3.1.1. Ten word list-learning test
      3.1.2. Digit span task
      3.1.3. Word-recognition test
      3.1.4. Paired-associate learning test
      3.1.5. Block span task
      3.1.6. Word stem completion task
      3.1.7. Category fluency test
      3.1.8. Mirror-reading task
      3.1.9. Perceptual identification task
      3.1.10. Two-alternative word-recognition test
3.2. Visual Association Test ................................................................. 48
4. Analyses – Chapter III ................................................................. 48

II The second administration of the memory test battery .......... 49
1. Sample ........................................................................... 49
2. General procedure ................................................................. 50
3. Material ........................................................................... 51
4. Analyses – Chapter IV and V .................................................. 52

Appendix A: MMSE group classification criteria ......................... 54
Appendix B: Selection procedure based on LASA third cycle data .... 55
Appendix C: Computation of the ‘ultimate MMSE’ score ............... 56
Appendix D: Stimuli in each subtest ............................................. 57
Appendix E: Development over time of all subjects initially tested with the memory test battery ............................................. 62

CHAPTER III: RESULTS AND DISCUSSION OF THE FIRST ADMINISTRATION OF THE MEMORY TEST BATTERY ....... 65
1. A first description of memory performance of the elderly subjects .... 66
2. Reliability of each subtest .......................................................... 67
3. Influence of age, education, sex and MMSE on each subtest ........ 72
4. Differentiating between the cognitively impaired subjects and the matched normal control subjects: results per subtest ................................................. 74
4.1 Ten word list-learning test ....................................................... 75
4.2 Digit span task ................................................................. 76
4.3 Word-recognition test ............................................................ 76
4.4 Paired-associate learning test ................................................. 78
  4.4.1 Main results and learning curve in the ‘Paired-associate learning test’ .... 78
  4.4.2 Difference in performance between the ‘Ten word list-learning test’ and
the ‘Paired-associate learning test’ .............................................. 79
  4.4.3 Nature of errors made in the ‘Paired-associate learning test’ .......... 81
4.5 Block span task ................................................................. 82
  4.5.1 Main results of the ‘Block span task’ ................................. 82
  4.5.2 Difference in performance between the ‘Digit span task’ and the ‘Block
span task’ ........................................................................ 82
4.6 Word stem completion task ................................................... 83
  4.6.1 Main results of the ‘Word stem completion task’ .................... 83
  4.6.2 Reaction times in the ‘Word stem completion task’ ............... 84
4.7 Category fluency test ............................................................. 85
  4.7.1 Number of correct exemplars per subcategory ..................... 85
  4.7.2 Nature of incorrect responses in the ‘Category fluency test’ ....... 86
4.8 Mirror-reading task .............................................................. 87
  4.8.1 Main results of the ‘Mirror-reading task’ ......................... 87
  4.8.2 Effects of repetition of items in the ‘Mirror-reading task’ ....... 88
  4.8.3 Practice effects in the ‘Mirror-reading task’ ....................... 89
4.9 Perceptual identification task ................................................ 93
  4.9.1 Main results of the ‘Perceptual identification task’ ............... 93
  4.9.2 Word frequency effects .................................................. 94
## CONTENTS

4.10 Two-alternative word-recognition test .......................................................... 95  
4.10.1 Main results of the ‘Two-alternative word-recognition test’ ....................... 95  
4.10.2 Difference in performance between the ‘Word-recognition test’ and  
the ‘Two-alternative word-recognition test’ .................................................. 96  
4.11 Visual Association Test ................................................................................. 97  
5. Discriminative ability of the memory test battery ............................................ 98  
6. Factor analysis .................................................................................................... 101  
6.1 Latent factors within the memory test battery .............................................. 101  
6.2 The differential value of individual subtests within the memory test battery 107  
6.3 The role of implicit memory within the memory test battery ....................... 107  
7. Conclusion .......................................................................................................... 109

## CHAPTER IV: RESULTS AND DISCUSSION OF THE SECOND  
ADMINISTRATION OF THE MEMORY TEST BATTERY ....113

1. Reliability analyses of the memory test battery .............................................. 114  
2. Influence of the demographic and the screening variables on each subtest .... 116  
3. The effects of ‘preclinical dementia’ on the level of memory performance in  
normal ageing...................................................................................................... 118  
4. Differences in memory performance (over time) between various clinical  
subgroups of elderly subjects, as defined at T2 .............................................. 122  
4.1. Ten word list-learning test ............................................................................ 123  
4.2. Digit span task .............................................................................................. 124  
4.3. Word-recognition test .................................................................................. 125  
4.4. Paired-associate learning test ...................................................................... 126  
4.5. Block span task ............................................................................................ 126  
4.6. Word stem completion task .......................................................................... 127  
4.7. Category fluency test ................................................................................... 128  
4.8. Mirror-reading task ..................................................................................... 128  
4.9. Perceptual identification task: ‘semantic memory’ ..................................... 129  
4.10. Perceptual identification task: ‘priming’ ...................................................... 130  
4.11. Two-alternative word-recognition test ....................................................... 130  
4.12. Visual Association Test .............................................................................. 131  
4.13. Development of performance on the Mini-Mental State Examination  
(MMSE) .............................................................................................................. 132  
4.14. The subtests most sensitive to decline in incident dementia ..................... 133  
5. The profile of memory measures best predicting dementia before the diagnosis can be made ................................................................. 136  
5.1. The prediction of dementia, according to the DSM-IV criteria of dementia 138  
5.1.1. The prediction of dementia in the entire group of elderly subjects ......... 138  
5.1.2. The prediction of dementia in the ‘Cognitively Impaired’ (CI) group 141  
5.2. The role of the ‘minimal dementia’ subjects .............................................. 146  
6. The profile of memory measures best discriminating between demented and  
nondemented elderly subjects at the time of diagnosis .................................. 150  
7. Identification and characterization of nondemented but memory-declined subjects .......................................................................................................... 154  
8. Conclusion ........................................................................................................ 157
CHAPTER V: NATURE OF PERFORMANCE IN THE ‘CATEGORY FLUENCY TEST’: AN EXPLORATION OF THE SPECIFIC RESPONSES

1. Introduction .................................................................................................................. 161
2. Method .......................................................................................................................... 163
   2.1. Switching and clustering scores .............................................................................. 163
   2.2. Frequency distribution of responses ....................................................................... 164
3. Results and discussion of the first administration of the ‘Category fluency test’ – a comparison of scores between the cognitively impaired and the normal control subjects .................................................................................................................. 165
   3.1. Results ..................................................................................................................... 165
      3.1.1. Switching and clustering in the ‘Category fluency test’ ..................................... 165
      3.1.2. Frequency distribution of responses generated in the ‘Category fluency test’ ................................................................. 167
   3.2. Discussion .............................................................................................................. 168
4. Results and discussion of the second administration of the ‘Category fluency test’ – the development of scores over time .................................................................................................................. 169
   4.1. Results ..................................................................................................................... 169
      4.1.1. Switching and clustering over time ..................................................................... 169
      4.1.2. Frequency distributions of responses over time ................................................. 172
   4.2. Discussion .............................................................................................................. 175
5. Predictive value of the various scores of the ‘Category fluency test’ regarding dementia .................................................................................................................. 176
   5.1. Results ..................................................................................................................... 176
   5.2. Discussion .............................................................................................................. 179
6. Conclusion ..................................................................................................................... 179

Appendix A: Hierarchical model of exemplars of animals named in the ‘Category fluency test’ .................................................................................................................. 182

Appendix B: Hierarchical model of exemplars of occupations named in the ‘Category fluency test’ .................................................................................................................. 183

CHAPTER VI: SUMMARY AND GENERAL DISCUSSION .................................................................................................................. 185

1. Summary of the main findings ....................................................................................... 185
   1.1. General design and aim of research ......................................................................... 185
   1.2. Characteristics of the battery .................................................................................. 185
   1.3. Impact of cognitive status in nondemented subjects ................................................ 186
   1.4. Preclinical assessment of dementia, two years in advance ...................................... 186
   1.5. Differential (cross-sectional) assessment of dementia .............................................. 188
2. Methodological considerations ....................................................................................... 189
3. Relevance and implications for clinical practice ........................................................... 191
4. Recommendations for future research .......................................................................... 193
5. Conclusions ................................................................................................................... 194
