Acknowledgments

Doctor of Philosophy, PhD elevates the academic capabilities as it provides an individual a certification to be an independent researcher. To arrive to this stage involves a long journey which contains diverse aspects; helpful people, collaborations, high tech instruments, and above all full dedication, enthusiasm and patience of all of them. A team work makes complex things materialise. Here, I take an opportunity to express my tribute to all of the team members because of whom this thesis came into an existence.

The roots of performing my PhD in the Netherlands can be tracked back to my MSc period spent at Wageningen. There, I learnt the ‘basics of molecular biology’ which completely convinced me about the high standards of the Dutch scientific system. Thereafter the period spent in USA for performing my MSc thesis research work transformed me to accept ‘what it takes’ to answer complex scientific questions. Equipped with these two crucial ingredients and many ambitions, I landed at the Laboratory of Molecular Biology of the Wageningen University.

I begin by thanking Prof. Ton Bisseling from Wageningen University who always remained very positive and displayed his complete confidence in me. It was one of his proposals which finally realised into my appointment as an AIO.

Most important person behind the whole project was my promoter Prof. Dorus Gadella. Dorus, I thank you for appointing me as an AIO without knowing me directly. We initiated the project from the scratch by developing some microtubule reporters and standardising the BY-2 cell transformation protocol. Thereafter we touched some of the fundamental questions existing for a long time in the field of plant cell biology. I appreciate your motivation to always include the most advanced imaging techniques to sort out the things inside individual living cells by providing a crucial ‘time’ dimension. At the same time I thank you for providing me the freedom to read, plan and execute the experiments and also for allowing me to continue in new directions. Mainly these undefined directions and our constant curiosity brought us close to the questions which this thesis attempts to answer. I learned many advanced microscopic techniques and advantages of quantitative analysis. I also learned from you about the patience to make the manuscript look better and better which sometimes took more time than the real experiments but finally yielded completely crystallised papers.

I thank Dr. Teun Munnik for shaping a sound collaboration which resulted into exploration of a link between phospholipase D and microtubules. His thorough knowledge
Acknowledgments

of phospholipase D resulted into formulation of an exciting model. I also thank you for teaching me how to run a TLC and your readiness to still enjoy real lab work if necessary.

Next I thank Dr. Frantisek Baluška for making me understand the philosophy of ‘working of the cell’ and the commonalities between plant and mammalian cells. Your constant enthusiasm and minute to minute updated literature knowledge provided me some of the important insights to plan the experiments mentioned in Chapter 5. I also would like to thank Dr. Jaidep Mathur who provided GFP-AtEB1 construct which formed the basis to analyse the endoplasmic microtubule aspects described in Chapter 6.

Hereby I thank all the Thesis Committee Members for their thesis evaluations.

I also wish to thank Prof. Anne Mie Emons, Prof. Marileen Dogterom, Prof. Bela Mulder, Dr. Jan Vos, Cătălin Tănase and Marco Consentino-Lagomarsino for stimulating discussions at the initial phase of plant microtubule dynamic instability analysis.

Now, I continue with people from Wageningen University where I started my PhD project. All Molbi-ers thank you for your constant enthusiasm, timely help and a family feeling. I thank Dr. Henk Franssen for the everlasting energy and charismatic humor towards everything including science. I thank Prof. Sacco de Vries for providing an important view of finding out practical solutions for diverse difficulties and for his tremendous sentences full of ‘bidirectional meaning’. I thank Dr. Joan Wellink and Dr. Rene Geurts for timely guidance. Then, I turn towards Tom for introducing me to the tobacco BY-2 cell cultures which kept me busy for the next four years. I thank Gerard for making available all the green fluorescent protein versions, vectors and protocols crucial to begin my project efficiently. I thereafter thank Jan C, Jan V, Khalid, Bert, Paul, Casper, Jenny, Valerie, Cathy, Lena, Marijke, Jan H. for providing me a constant support and instant help for carrying out my beginning experiments in a right way. I also thank Jan Willem Borst and Mark Hink for providing instant help with the confocal. I also thank Ruben for sharing together with me the hard times of BY-2 transformations.

I thank Gadella Group for everything. Joop, I thank you for being there beside me to work also with plants and to prepare the best coffee. Thank you for teaching me the SPIM and FLIM and to be my paronymf. Joachim, thanks for Bodipy-PA experiments and timely discussions. Erik v M, thanks for building the FLIM/SPIM system. I thank Gert-Jan K, Merel and Fabio for the friendly atmosphere. I thank Norbert, Mark and Wijnand for helping me with microscopes and data processing. I thank Erik M for being extremely enthusiastic about my live cell analysis. I thank Rajesh for the evening and weekend company and Conrad for sharing his excellent views about the past and current biology. I thank Prof. Nanne Nanninga for attending my presentations with great curiosity. I thank all other Molecular Cytology members for their guidance and timely help.
Acknowledgments

I thank Ana ‘the Chica’ for performing *in vivo* PLD activity analysis and teaching me the ‘hot’ radiolabeling. Gert-Jan d B for constructive interactions and Bas for interesting conversations and TLC film developing. I thank rest of the Plant Physiology and Plant Pathology community for maintaining warm atmosphere.

Now, I take an opportunity to thank my friends from Wageningen who made my stay in Wageningen unforgettable. Frank and Annuska thank you for your warm hospitality and caring. Ajay, Batian and Ondine thank you for having excellent times of cooking, eating, drinking and partying. Gerard, thank you for always travelling together with me to Amsterdam, for enjoying the exciting times at Amstel station, for sharing your insects knowledge and for being my paronymf. Vincent, Violeta and Justyna thank you for being good neighbours. Sylvester, Esther, Bai Yuling, Rays, Isabelle, thank you for keeping our friendships longer and warmer. I acknowledge the Indian Curry group, especially Basav and Shital, Sudhakar and Rishi for sharing Diwalis. Seetharam for letting me know the exact maths of questions, experiments, results, papers and Vishal and Shilpa for remembering the old schooldays from Dapoli.

I thank all my teachers and relatives from India whose support and precious best wishes provided a light to continue my scientific endeavours. I especially would like to mention Bharati auntie for providing support for my abroad aspirations.

I thank my sister Vrishali and brother Mahesh for making my time in India happy. I express my best wishes for achieving their career ambitions in time. I thank Joris, Gilian and Sjoerd, Stéphanie for being supportive and curious about my scientific advancement.

I thank my parents in laws Mr. Jan and Mrs. Marij Rutten for being there for everything. You provided me the home in the Netherlands. Without your love and constant support my stay in the Netherlands would never have been successful. Bedankt voor alles!

I attempt to express my feelings for my beloved parents Prof. Bacharam Dhonukshe and Mrs. Vimal Dhonukshe that are hard to fit into few words. Both of you sacrificed every single aspect to provide me the best training to realise my task. Your constant efforts and highly academic home atmosphere developed my interest in science. Though you are far away in the scale of kilometers you will never be separated from my soul. I express my profound gratitude for making me believe that ‘miles and miles I have to go before I sleep’.

Finally I come to my beloved wife Rosalie. Being busy with your own PhD project you gave me everything. Your love, help in the house and your understanding allowed me to put the extensive efforts in my research goals. Your sacrifice to accept my absence at home reflects in every single sentence of this thesis. Your timely editing finally brought this thesis to what it looks now. I thank you from my heart and soul for being my bound partner for the lives. I am happily looking forward towards our most fruitful result which will flower in April, 2005.
