During my PhD study, I learned a lot, not only about the research, but also how to cope with western culture and attitude, and to deal with western people, although in a hard way. Now when thinking back of my experiences, I realize that it is quite difficult for me to address my gratitude in my limited English to all the people who have helped and supported me. All I could say is that without the kindest help and support from all the colleagues and friends, this thesis would not exist. In particular, I would like to thank the following people:

Prof. dr. Bob ten Cate, my promoter, thank you for giving me this great chance to do my PhD in your group; thank you for guiding me through the research projects and revising all the manuscripts. I can not image how much extra work my poor English had given you. Also thank you for caring about me and helping me go through difficult periods, especially inviting me every Christmas holiday during the past four years.

Cor van Loveren, thank you for giving me a lot of useful advice on the research projects and my manuscripts, and thank you for making time for me whenever I ask for it. I did learn a lot from you.

Véronique Gerardu, my dear friend, thank you for your endless support, for sharing my happiness and sadness, for teaching me Dutch (though I am not a good student) and for willing to be my ‘paranimf’. I feel really lucky to be your friend.

Mark Buijs, I do not remember when it started. I only know that whenever I have good or bad news, encounter problems about the work or my personal life, I would talk to you. You might not find me a solution eventually but you are always willing to listen, to help. Thank you! Also thank you for willing to be my ‘paranimf’.

Rob Exterkate, thank you for giving me all the technical support and thank you for encouraging me when I was depressed.
Michel Hoogenkamp, thank you for all the tips on microbiological work and all the helps during the CDFF experiments. Also thank you for always trying to find me detailed and precise answers.

Egija Zaura, thank you for helping me from the day when I arrived to Amsterdam. As a senior, you helped me to get familiar with the lab, and as a foreigner, you helped me to go through all the regulations about the ID card applications.

Suzanne Luppens, thank you for the advice on the microbiological work and the tips on the thesis writing.

Rifat Özok, thank you for showing me some of the lab equipments and for giving me the instructions about the preparation of the thesis and defense.

Minkai Wu, thank you for the advices on how to do research and how to write articles.

Anneke Reijnders and Peter van Amerongen, thank you for caring about me and showing me nice places in the Netherlands.

Guus van Strijp and Marijke Voorn, thank you for finding me all the materials I needed for the experiments.

Maxim Lagerweij, thank you for teaching me the TMR software and helping me with your car when I had to move.

Wilfred Moorer, thank you for showing me the usage of phase contrast microscope and giving me the advice on microbiology.

Irene Aartman, thank you for the advice in statistics.

Leszek Sczaniecki, thank you for the help with posters, drawings in the paper, and the cover of this thesis.

John André Wekking and Jeanette Mosseman, thank you for giving me greetings and encouragements in those evenings when I worked late.
Prof. dr. Paul Wesselink, Prof. dr. Henny van der Mei, Prof. dr. Arie van Nieuw Amerongen and Dr. Hans de Soet, thank you all for willing to be in the committee and for the comments on the thesis.

Jan van Marle and Henk van Veen, thank you for teaching me the confocal microscope, and allowing me to use the equipment. It is pity that I did not get any publication out of the work.

Kitty Hamersma, it sounds a bit odd, but we did meet in the tram and then became friends. Thank you for your support and warm dutch hospitality.

In the past four years, there were a lot of people who I worked or stayed with for only a short period of time, but they helped me starting my life in Amsterdam and encouraged me to face the difficulties. I would like to thank them even though I can not list all their names here.

At last, I would like to thank my family for their strong support, their trust, and their love.
